For every managing partner who knows exactly
which former client they should call this week
and knows exactly why they have not.

"Go to market in professional services is as much a mindset issue as it is an operational one. The firms that grow are the ones with real clarity about the problems they solve, for whom, and what outcomes that produces. This book builds the system around that clarity."

JONATHAN COPULSKY

Former CMO, Deloitte | Senior Lecturer, Northwestern Kellogg

About the Authors

BEFORE YOU BEGIN

Preface

We had the relationships. We just stopped showing up.

I spent twenty six years inside professional services firms before I understood the one thing none of us could see.

It was not a strategy problem. It was not a marketing problem. It was not even a sales problem, though every managing partner I knew described it that way. The real problem was simpler and more painful than any of those.

We had the relationships. We just stopped showing up.

At AArete, a $125 million management consulting firm where I served as CMO, we had thousands of relationships in our systems. Partners who had delivered extraordinary work. Clients who had thanked us publicly. Colleagues who had moved to new firms and new budgets. Every single one of them represented a conversation waiting to happen. And almost none of those conversations were happening.

I would walk the floors and see brilliant consultants who could diagnose a client's operational problems in thirty minutes but could not explain why their pipeline was empty. I would sit in partner meetings where the answer to "where is new business coming from?" was some version of "we are working on it." I would review CRM data that showed hundreds of contacts we had not spoken to in over a year.

Not strangers. People who knew us. People who trusted us. People who, if we had simply called, would have taken the meeting.

That is the confession. After twenty six years in this business, the biggest growth lever I found was not a new market, a new service line, or a new technology. It was the relationships we already had and were ignoring.

I wish someone had told me that at the beginning.

◆ ◆ ◆

The Other Side of the Same Problem

I came at the same problem from the other side.

My first book, *The Science of Story*, took me inside 500 companies to understand how culture becomes brand. I spent years helping firms find their authentic story. Then I realized something that changed the direction of my career: the story does not matter if no one hears it.

Firm after firm had done the hard work. They had clarified their positioning. They had built case studies. They had invested in thought leadership. And then they let their best relationships go silent. Not because they did not care. Because no system existed to keep those relationships warm.

After *The Science of Story*, I spent the next decade running Mabbly, a GTM consultancy for professional services firms. I hosted a podcast. I interviewed over 450 PS leaders. I sat in Discovery Sessions with managing partners across management consulting, legal, financial advisory, IT services, engineering, and architecture firms.

The pattern was always the same.

Every firm had a Dead Zone. A graveyard of relationships sitting in their CRM, untouched for months or years. Contacts who once trusted them. Contacts who had referred them. Contacts who, in many cases, were actively looking for exactly what the firm could provide.

Two books. Over 700 combined interviews. More than a decade inside these rooms. And the same blind spot in every single one.

That is what this book is about.

◆ ◆ ◆

What This Book Is

A system. The first framework built specifically for how professional services firms actually grow. Not borrowed from

SaaS. Not adapted from consumer marketing. Built from the ground up for firms where revenue comes from relationships, not funnels.

GTM for professional services is a system for activating the market you already own.

That sentence is the thesis. Everything in this book serves it.

What this book is not. A marketing book. A sales book. A technology pitch. If you are looking for a playbook on running LinkedIn ads or building a content calendar, this is the wrong book. Those things have their place. This is not it.

Who this is for. Managing partners and growth leaders at professional services firms between $5 million and $100 million in revenue. If you run a consulting firm, a law firm, a financial advisory practice, an IT services company, an engineering firm, or an architecture practice, and you know your best growth comes from relationships but you have no system for activating them, this book is for you.

Before you read further, score yourself on two things. One, do you believe your existing relationships are your most valuable growth asset (1 to 5). Two, can you articulate your ideal client in two sentences (1 to 5). If both are 3 or above, this book is for you. If either is below 3, start with Chapter 4.

Who this is not for. If your firm is growing entirely through inbound and you have no interest in relationships,

skip this. If you have fewer than 50 contacts in your network, you need a different starting point. If you are looking for a quick fix or a hack, we cannot help you. This is a system. Systems take commitment.

◆ ◆ ◆

The Three Laws

Before the system, three laws. If these feel true, keep reading.

> **FIRST LAW**
>
> **Proof before pitch.** No professional services firm has ever won a significant engagement on the strength of their pitch deck. They won it on what someone the client trusted said about them.

> **SECOND LAW**
>
> **Relationships before revenue.** Firms that chase revenue directly get less of it. Firms that invest in relationship depth find that revenue follows.

> **THIRD LAW**

> **Signal before message.** Reaching out without a reason is selling. Reaching out because something relevant happened in their world and you have something useful to offer about it is service.

◆ ◆ ◆

How to Read This Book

Part One names the problem. The Dead Zone. Why it exists. Why every framework you have tried was built for someone else.

Part Two builds the system. Five layers. DISCOVER. PROVE. DESIGN. ACTIVATE. COMPOUND. Each one builds on the last.

Part Three gives you the playbook. Templates. Calculators. Checklists. The tools to implement everything from Parts One and Two starting Monday morning.

Richard wrote the scenes. I found the patterns. Together, we built the system neither of us could have built alone.

Let's begin.

START HERE

Introduction

If you are a managing partner reading this on a Tuesday night, this book is for you.

Here is what we keep seeing.

A firm between five and a hundred million in revenue. Two or three partners carrying most of the rainmaking. A CRM with anywhere from 800 to 4,000 contacts in it, most of them cold, none of them systematically managed. A marketing team producing content that partners do not read. An outbound agency invoice that cannot be traced to a single signed engagement. A pipeline that feels either empty or on fire, with no middle state that feels like control.

The firm has been at the same revenue for two to four years. Not because the market is bad. Because the system the

firm is using to grow was designed for a different business entirely.

This book is the system we wished existed when we were sitting on the other side of that desk.

◆ ◆ ◆

Who This Book Is For

Managing partners, founders, and rainmakers of professional services firms between five million and one hundred million in annual revenue. Consulting firms. Agencies. Law practices. Accounting and advisory. Architecture and engineering. Boutique financial services. Any firm whose revenue is delivered by people, bought on trust, and referred through relationships.

If your last five closed deals came through a funnel, put this book down. It will not help you.

If your last five closed deals came through relationships, referrals, or former clients showing up at the right moment, the rest of this book is a manual for turning that pattern from luck into infrastructure.

◆ ◆ ◆

What Is Inside

The book has three parts.

Part One is the diagnosis. Why the go to market frameworks you have been handed do not work for professional services. What the right map looks like. Why the firms we interviewed, many of them with far more talented growth leaders than we have ever hired, still got stuck.

Part Two is the system. The Five Orbits, which is the map of every relationship in your firm's universe. The Five Layers, which is the engine that moves relationships through the map. One chapter per orbit. One chapter per layer. Every chapter written to be lifted and operationalized inside your firm this quarter.

Part Three is the commitment. What it takes to run the system without stopping. Why most firms fail in month seven. What it looks like on the other side of the twelve to eighteen month curve.

◆ ◆ ◆

How to Read It

Read it once in order. Then run the Monday Morning Tests.

Every chapter ends with a Monday Morning Test. The test is the actual thing your firm is not doing, laid bare in one prompt. Most of the tests take less than fifteen minutes. None of them require a new tool, a new hire, or a new budget line. All of them require the one thing firms always resist. Discipline applied to the relationships you already have.

The tests are the book. Everything else is context around them.

◆ ◆ ◆

The Promise

If you install the system and protect it for twelve to eighteen months, you will see three things happen. Cost per acquisition will drop by half or more. Pipeline will move from spiky to steady. Revenue per partner hour will double or triple.

Those are averages across the firms that have run the system to completion. Your firm will land somewhere on that range. The variable is not the system. The variable is whether you stop in month seven.

Start here. Read the next two pages. Then turn to chapter one.

TURN THE PAGE

PART ONE: THE PROBLEM

01

The Dead Zone

Or, the $2.4 Million Parking Lot Nobody Walks Through

Jay Russell knows exactly what a dying pipeline looks like. He has watched it happen a hundred times.

Jay is a principal at Lotis Blue Consulting, a professional services firm that advises law firms and accounting firms on the

operational problems their partners are too busy to notice. His clients are brilliant at their craft. They win work through reputation, through referrals, through the kind of handshake that turns into a six figure engagement over a single dinner. And then one day the dinners stop. Not because the relationships ended. Because nobody remembered to keep them going.

He described it to me with a precision that stopped the conversation: his clients' dormant contacts are *on life support*. Not lost. Not gone. On life support. Waiting for someone to do something.

Then he described the business development strategy at most of the firms he advises. An accountant sends a proposal to a client he has known for eight years. Closes the laptop. And hopes. No system. No signal. No follow up. Just hope dressed up as a business development strategy.

Jay did not use the words Dead Zone. He did not need to. He described it so accurately that the framework became obvious. If you run a professional services firm, you have lived Jay's story from the other side. You are the one with a laptop full of proposals and a calendar with no follow ups. You know exactly which former client you should call this week. And you know exactly why you have not.

◆ ◆ ◆

The Problem Everyone Recognizes and Nobody Names

Here is what I know after four years as CMO of a $400M consulting firm and two more years building a system to fix this exact problem: every professional services firm in the world has a Dead Zone. Every single one.

The Dead Zone is the space between a relationship that was once active and the moment someone decides to reach out again. It is not the space where contacts are lost. It is the space where contacts are forgotten. There is a critical difference.

Lost contacts require acquisition. Forgotten contacts require activation. One costs ten times more than the other. Guess which one every firm defaults to.

I spent those four years at AArete trying to solve this with the tools everyone told me to use. CRM workflows. Drip campaigns. Automated sequences. And I will be honest: I was spectacular at building systems that made the problem worse.

That is the self deprecating version. The honest version is worse. I had a database of thousands of contacts who knew us, trusted us, and had budgets. And I was spending my time figuring out how to reach strangers on LinkedIn.

◆ ◆ ◆

What GTM Actually Means for a Services Firm

Let me give you a definition that will either make you nod or make you uncomfortable. Ideally both.

GTM for professional services is a system for activating the market you already own.

Not finding new markets. Not building awareness with strangers. Activating the market you already own. The people who already know your work, already trust your judgment, already have the budget. They are sitting in your CRM right now, and you have not spoken to two thirds of them in over 90 days.

STAT 01.01

70%

relationship revenue

Of revenue comes from people the firm already knows. 0% of GTM infrastructure is built to activate those relationships.

Think about that for a moment. The tools you bought, the strategies you implemented, the playbook your head of BD is running right now. All of it was designed for a software company selling to strangers. You are not a software company. You do not sell to strangers. You sell to people who already trust you, at the exact moment they need what you do.

The entire GTM industry built the wrong map for you. And you have been following it because nobody drew a better one.

The managing partner who reaches out because something happened in your world is a peer. The one who reaches out because they need revenue is a vendor. Your CRM can tell the difference. Your contacts already have.

◆ ◆ ◆

The Anatomy of a Dead Zone

A contact enters your Dead Zone the moment three things happen simultaneously:

First, the last meaningful interaction was more than 90 days ago. Not the last email blast. Not the last holiday card. The last real conversation where one of you said something the other remembered.

Second, there is no scheduled follow up. No call on the calendar. No task in the CRM. No reason to reach out tomorrow that was established today.

Third, the contact still has the need. Their company still buys what you sell. Their problems have not disappeared. They have just moved on to the next thing. And you are no longer in their peripheral vision.

This is the critical distinction. Dead Zone contacts are not cold. Cold implies they never knew you. Dead Zone contacts knew you. Trusted you. Maybe even hired you. The relationship did not end. It just stopped being maintained.

And here is what makes it expensive: the longer a contact sits in the Dead Zone, the harder it becomes to reactivate them. Not because the trust disappears. Because the awkwardness of reaching out without a reason grows every month. After six months, the internal monologue is devastating: "I should have called them months ago. Now it will seem weird."

So they do not call. The Dead Zone wins.

◆ ◆ ◆

The Real Cost of the Dead Zone

Let me make this concrete. A managing partner at a $35M consulting firm has roughly 200 meaningful contacts in her network. People she has worked with, pitched to, shared a stage with, met through a warm introduction. Two hundred people who would take her call if she dialed right now.

Of those 200, she is actively in conversation with maybe 30. Another 20 are in some kind of pipeline, moving toward a decision or away from one. That leaves 150 contacts sitting in the Dead Zone. One hundred and fifty people who know her name, respect her work, and have not heard from her in months.

Now multiply 150 by even a conservative average deal size. At $35M in annual revenue across 14 partners, the average engagement is probably $150,000 to $250,000. If even 5% of those Dead Zone contacts would have converted with the right outreach at the right moment, that is over $1M in

revenue the firm never saw. Not because the opportunity did not exist. Because nobody noticed it.

This is happening at every professional services firm in the world. Right now. Today. While you read this chapter.

The managing partner is not lazy. She is not bad at relationships. She is drowning in delivery. The same thing that makes her great at client work, her total commitment to the engagement in front of her, is the thing that kills her pipeline. She finishes a project, looks up, and realizes she has not talked to anyone outside her current clients in four months.

Then she does what every managing partner does. She panics quietly. Tells her head of BD to "get more aggressive with outreach." Approves a budget for a lead gen tool. Starts the cycle over again. Chasing strangers while the people who already trust her sit in silence.

◆ ◆ ◆

The Formula That Changes Everything

There is a formula that fixes this. It is not complicated. But it requires you to stop thinking about outreach and start thinking about relevance.

SIGNAL + PROOF + CONTEXT = RESPONSE, NOT PITCH

A **signal** is something that happened in their world. A new hire. A funding round. A published article. A regulatory change affecting their industry. Something real.

The **proof** is your evidence that you can help with exactly that kind of situation. Not a case study PDF. A specific result: "We helped a firm like yours navigate this exact change. Their compliance costs dropped 30% in the first quarter."

The **context** is the personal relationship layer. You know this person. You worked together. You were introduced by someone they trust. That context turns a cold email into a warm note.

STAT 01.02

8.1%

the multiplier

Response rate when Signal + Proof + Context are present. Industry average for generic outreach: 1.3%. That is not marginal. That is a different category.

◆ ◆ ◆

Truth I: Your Next Client Already Knows You

This is the first of five truths that underpin everything in this book. And it is the one that makes managing partners the most uncomfortable.

Your next client already knows you. They are in your network. They have met you. They have seen your work. Maybe they hired you five years ago. Maybe they sat next to you at a conference dinner and said, “We should talk.” And then you never did.

The discomfort is not about the truth. It is about the implication. If your next client already knows you, then the problem is not acquisition. The problem is activation. And that means the solution is not more marketing. It is better timing, better signals, and better reasons to reach out.

Which means the $40,000 you spent on that lead generation tool was pointed in the wrong direction.

I know this is uncomfortable. It was uncomfortable for me when I realized it. I had built an entire career on the assumption that growth meant reaching more people. It does not. Growth means reaching the right people at the right time with the right reason. And most of those people are already in your phone.

YOUR DEAD ZONE VALUE

AArete is a global management consulting firm with more than 500 professionals and $125M in annual revenue. Matthew Trimble, who works there, opened HubSpot during a call and found 160 dormant proposals. One hundred and sixty proposals sent to qualified prospects that received no response and no follow up. Multiply 160 by the average deal size at a firm that large. That is not a pipeline problem. That is a parking lot full of Ferraris with the keys still in them.

Step 1: Open your CRM. **Step 2:** Count the proposals you sent in the last 18 months that received no response and no follow up. **Step 3:** Multiply that number by your average deal size. **Step 4:** Write the number down. That is your Dead Zone value. If the number does not make you uncomfortable, you counted wrong.

YOUR FIRM'S MATH (FOR THE \$35M FIRM)

Here is the math for a firm like yours. 500 contacts in the CRM. 50 to 80 in Orbits 01 and 02 (Core Proof and Active). 350 to 400 in the Dead Zone. Average deal size: $150K to $250K. If 5% of your Dead Zone converts with the right signal at the right time: 350 x 5% = 17 to 18 new conversations. At a 20% close rate, that is 3 to 4 new clients. At $175K average: $525K to $700K in revenue sitting in contacts nobody is touching. That math will appear throughout this book. It is always your math.

◆ ◆ ◆

Why This Book Exists

This book exists because no one else was going to write it. Every GTM framework, every playbook, every best practice guide that exists today was written for product companies. SaaS companies. Companies that sell to strangers at scale. Companies that measure success in MQLs and conversion rates and average contract values.

That is not your world. Your world is built on trust, on relationships, on the specific moment when someone you know needs exactly what you do. And the only system you have for capturing that moment is hope.

Hope that they will remember you. Hope that they will call. Hope that the proposal you sent eight months ago will suddenly rise to the top of someone's inbox.

This book replaces hope with a system. Not a complicated system. Not a system that requires you to hire three people and buy four tools. A system built on the relationships you already have, activated by the signals that are already there, timed to the moments that already matter.

We are going to walk through Five Orbits, starting with the proof you already have and working outward to the strangers everyone else told you to start with. We are going to talk about signals, about timing, about why the managing partner who reaches out on the right day with the right reason closes at six times the rate of the one who sends a monthly newsletter and prays.

We are going to talk about the Dead Zone. A lot. Because once you see it, you cannot unsee it. And once you measure it, you cannot ignore it.

Five Orbits. Five layers. One formula. And a Dead Zone that is about to become the most valuable asset on your balance sheet.

CHAPTER AT A GLANCE

The Dead Zone is the space between a relationship that was once active and the moment someone reaches out again. It is where most of your revenue potential sits untouched.

The Formula: Signal + Proof + Context = Response, Not Pitch. When all three are present, response rates hit 8.1% versus 1.3% for generic outreach.

Truth One: Your next client already knows you. The problem is not acquisition. It is activation.

The Math: A $35M firm with 150 Dead Zone contacts is sitting on $525K to $700K in unrealized revenue. Every firm has this number. Most have never calculated it.

MONDAY MORNING TEST

Open your CRM right now. Count the contacts you have not spoken to in more than 90 days who have no scheduled follow up. Multiply that number by your average deal size. Write that number down.

That is your Dead Zone value. Now pick one name from that list and find one signal in their world this week. Check their LinkedIn profile for any update in the last 30 days. A new role. A company announcement. A post they wrote. Find it. Write it next to their name.

Starting in Chapter 2, we are going to figure out why every tool you bought to fix it made it worse. But you just took the first step.

PART ONE: THE PROBLEM

02

The Wrong Map

Or, How I Spent Real Money Learning That the Funnel Was Drawn for a Different Business

The first time I hired a marketing agency, I thought I was solving the problem.

Monogram Group was stuck at $2 million. We were a branding agency competing against thousands of firms with the

same capabilities, the same language, and the same pitch decks with different logos. I knew we needed help. So I hired a marketing firm to build us a funnel.

They delivered exactly what I asked for. A beautiful funnel deck. Top of funnel. Middle of funnel. Bottom of funnel. Awareness. Consideration. Decision. Content strategy. Lead magnets. Nurture sequences. The whole architecture.

One problem. None of my clients had ever come through a funnel.

Not one. Every significant engagement Monogram Group had ever won came through a relationship. A former colleague. A board member's recommendation. A managing partner who remembered a conversation from two years ago. The deals that built the firm came from people who already knew us. The funnel was designed to attract strangers.

I spent real money learning that the map I had been given was drawn for a different territory.

◆ ◆ ◆

Same Story, Every Firm

Every professional services firm has the same story. The details change. The pattern does not.

They hire marketing. Marketing builds a funnel. The funnel produces leads. The leads are strangers. Real revenue continues to come from relationships nobody is systematically managing. The firm concludes that "marketing does not work for us" and goes back to hoping the phone rings.

After hundreds of Discovery Sessions, I can tell you this is not a marketing failure. It is a map failure. The framework the firm is using was built for a different business model entirely.

◆ ◆ ◆

The Buyer Journey Inversion

The traditional buyer journey looks like this: Awareness, then Consideration, then Decision. It was designed for products. It assumes the buyer is a stranger who needs to be educated through a funnel until they are ready to purchase. That model built Salesforce. It built HubSpot. It powers every B2B SaaS company on the planet.

It is backwards for professional services.

> **THE INVERSION**
>
> **Traditional (product):** Awareness → Consideration → Decision
>
> **Professional services:** Trust → Signal → Conversation → Scope

In professional services, the decision is often made before the firm knows the buyer is looking. The real journey is inverted. The buyer already has a shortlist. They already know who they respect. They are waiting for the right moment, the right trigger, the right reason to pick up the phone.

STAT 02.01

81%

already chosen

Of B2B buyers already have a preferred vendor when they first make contact.

6SENSE 2024 BUYER EXPERIENCE REPORT

Only 3% of buyers fully trust sales representatives. 80% of the buying journey is self directed before a firm ever knows it is happening.

The funnel assumes you need to generate awareness. The PS buyer already knows you exist. The funnel assumes you need to nurture consideration. The PS buyer has already considered you based on years of relationship. The funnel assumes the decision happens at the bottom. In professional services, the decision happened at the top, years ago, the first time you delivered great work.

The map is wrong.

◆ ◆ ◆

The Internal Dead Zone

Victoria, who runs our team at Mabbly, described what this looks like from the inside.

> *"You have people on one side doing what they believe is truly moving the needle forward. They look over at marketing and they say, okay, that is nice, that is pretty, that is cute."*

That is the internal Dead Zone. Business development and marketing speaking different languages. Partners who close deals through relationships looking at the marketing team's funnel metrics and seeing nothing that connects to how revenue actually happens. Marketing teams producing content and campaigns that generate MQLs that partners ignore because the leads are strangers.

The disconnect is not personal. It is structural. The map creates the disconnect.

Julie Fleming studied this phenomenon in law firms and named it precisely: the reluctant rainmaker. Her research found that business development resistance in professional services is fundamentally fear based, not capability based. Partners score high on autonomy and skepticism, low on resilience. They fear the personal risk of failure. They feel more confident performing technical work, so they prioritize billable hours over relationship activation. It is not that they cannot sell. It is that selling feels like a betrayal of the identity they built over 15 years of delivery work.

The wrong map makes this worse. When you hand a reluctant rainmaker a funnel designed for strangers, you have given them the one tool guaranteed to confirm their belief that business development is not for them.

> *Even among professional services marketers, we were using the same words, but we had different definitions of those words.*

HEAD OF MARKETING, A MIDMARKET PROFESSIONAL SERVICES FIRM

◆ ◆ ◆

Wrong Map, Wrong Infrastructure

When you build your growth system around a funnel designed for strangers, you naturally organize your team around stranger acquisition. Content marketing. SEO. Paid media. Event sponsorships. All of it aimed at the outer edges of your universe. People who have never heard of you. People with no reason to trust you. People who, even if they convert, will take 12 to 18 months of nurturing before they are ready for a conversation.

Meanwhile, the 400 dormant contacts in your CRM would take the meeting this week.

That is the wrong map in action. Not just wrong strategy. Wrong infrastructure. Wrong metrics. Wrong investment.

Mandy Lewis, who runs marketing at an IT services firm, showed me what happens when the infrastructure fails completely. At her previous company, they had multiple CRMs across different business units. Contacts that existed in one system were invisible in another. Relationships that partners on the East Coast had built were unknown to the team on the

West Coast. People literally fell through the cracks between databases.

> *"We had a lot of old leads, old clients that would get re energized when someone took over that territory. But we had no idea they existed until someone stumbled across them."*

Multiple CRMs. Multiple databases. Multiple teams. All of them operating with a map that assumes growth comes from the outside. And the relationships they already had, the ones that would have taken meetings if anyone had called, were scattered across systems nobody was managing.

◆ ◆ ◆

The Wrong Map Produces the Wrong Output

The wrong map does not just waste money. It produces the wrong output.

I spent six weeks preparing a pitch deck for a $2 million engagement. Custom research. Competitive analysis. Implementation timeline. Pricing options. It was thorough. It was professional. It was impressive.

We lost it to a two person firm whose founder had published a white paper.

Their proof was better. Not their team. Not their capabilities. Not their price. Their proof. One white paper that demonstrated they understood the client's problem better than our sixty page deck did.

That is what the wrong map produces. It produces pitch decks when the market wants proof. It produces awareness campaigns when the market wants relevance. It produces

lead generation when the market already knows who it trusts.

Mandy Lewis identified the deeper problem: “Mid funnel leak. Deals just not converting and not closing at all. Because the messaging is not right for an organization.”

The firm had the relationships. They had the access. But the wrong map gave them the wrong message. And the wrong message at the right moment is worse than no message at all. Because now you have confirmed for the prospect that you do not understand them.

STAT 02.02

0.2%

cold email reality

Cold email conversion rate in professional services. For every 1,000 cold emails, two responses.

Meanwhile, signal activated outreach to existing relationships converts at 8.1%. Same contacts. Same firm. Different system.

That is not a marginal improvement. That is a 6x multiplier.

The difference is not effort. It is map.

◆ ◆ ◆

So What Is the Right Map

If the funnel is wrong, what is right?

The answer is not "no system." Most professional services firms default to no system at all once they realize the funnel does not work. They go back to hoping. Back to "our partners bring in the work." Back to the closed laptop and the untouched CRM.

That is not the alternative. The alternative is a system built for how professional services firms actually grow. One that starts with the relationships you already have instead of the strangers you do not. One that recognizes that timing matters more than targeting. One that treats your Dead Zone as an asset instead of a problem to avoid.

The wrong map says: build a funnel, generate leads, nurture strangers, close deals.

The right map says: activate your market, read the signals, lead with proof, deepen the relationships that already exist.

The next chapter introduces the formula that makes it work.

CHAPTER AT A GLANCE

The Map Is Wrong. Every GTM framework you have been handed was built for software companies selling to strangers. Professional services firms grow through relationships, not funnels.

The Inversion. The traditional Awareness → Consideration → Decision journey is backwards for PS. The real journey is Trust → Signal → Conversation → Scope. By the time the buyer makes contact, the decision is usually already made.

The Cost. The wrong map does not just waste budget. It produces pitch decks when the market wants proof, awareness campaigns when the market wants relevance, and lead generation when the market already knows who it trusts.

The Multiplier. Cold email in PS converts at 0.2%. Signal activated outreach to existing relationships converts at 8.1%. Same contacts. Different system. 6x difference.

MONDAY MORNING TEST

List your last five closed deals. How many came through a marketing funnel? How many came through a relationship?

If the answer is what I think it is, you have been using the wrong map.

82% of decision makers review your LinkedIn before accepting a meeting. They are not evaluating your funnel.

They are evaluating your proof. Your map should reflect that.

PART ONE: THE PROBLEM

03

The Formula

Or, Why Signal Without Proof Is Just Interruption

Fourteen minutes.

That was the gap between me seeing the LinkedIn post and landing a calendar invite for a $180,000 engagement. The

contact was a general counsel I had worked with four years earlier at a firm that no longer existed. She had gone quiet. She was deep in our Dead Zone. Every stranger marketing tactic in the world would have put her on a drip sequence.

What happened instead was not magic. It was a formula.

I saw her post. She had just joined a private equity backed healthcare services company as their first in house legal leader. That was the signal. I sent her a short note. No pitch. No deck. What I sent was a three page summary of how two of my clients had built their first in house legal operations in the first 90 days, with the exact cadence they used. That was the proof. I mentioned the 2019 project we had closed together, the one where she had told me she hated being on the agency side of the table. That was the context.

Fourteen minutes later, a calendar invite hit my inbox.

I did not close her because I was a better marketer than the person running her company's inbound funnel. I closed her because I used the formula.

◆ ◆ ◆

The Formula

Here is what every professional services firm gets wrong. They think the reason their outreach fails is the message. So they rewrite the message. They hire a copywriter. They A/B test subject lines. They split test call to action buttons.

None of that fixes it. The message is not the problem. The structure underneath the message is the problem.

SIGNAL + PROOF + CONTEXT = RESPONSE, NOT PITCH

That is the whole system. Every piece of outreach that actually converts in professional services has those three elements stacked together. Every piece that fails is missing at least one of them.

Signal tells you the right moment. Proof tells the prospect you understand their problem. Context tells them you are not a stranger.

Strip out any one of the three and the formula collapses. Signal plus proof with no context is a very well timed cold email from a person they have never met. Signal plus context with no proof is a friendly note that gives the prospect nothing to act on. Proof plus context with no signal is a reach out with nothing to attach it to, so it lands as an interruption even when the relationship is real.

All three. Every time.

◆ ◆ ◆

Signal Is a Verb

Most firms treat signal like a noun. Something to collect. A data point on a dashboard.

Signal is a verb. It is the act of the market telling you that a specific person, at a specific moment, has just crossed a threshold where a conversation is welcome.

The signals that matter are almost always public. A new role. A funding round. A promotion. An acquisition. A hire on their team that suggests a new initiative. A podcast appearance. A keynote. A piece of content they wrote that reveals a problem they are actively working on. A LinkedIn comment on a post that exposes a point of view.

The signals that do not matter are the ones every vendor is chasing. Website visits. Email opens. Generic intent data.

Anyone who has bought a demand generation tool has been sold a dashboard of noise and called it intelligence.

STAT 03.01

14min

signal to calendar

Time between the LinkedIn post and the calendar invite on the engagement described in the opening scene. Signal plus proof plus context, compressed into one message.

The firms that win the relationship game do not have more signals than everyone else. They have better signals. They watch fewer inputs, more closely, and they move the moment the right one appears.

◆ ◆ ◆

Proof Is Not a Case Study

This is where every firm I have ever worked with gets stuck. They think they have proof. What they actually have is a library of case studies.

A case study is a retrospective. A story about what you did for someone else. Useful for a website. Almost useless at the moment of activation.

Proof is different. Proof is the single most specific artifact you can put in front of a prospect that makes them feel understood before the conversation starts.

> **PROOF VS. CASE STUDY**
>
> **Case study:** "We helped a $40M firm grow 30% year over year."
>
> **Proof:** "Here is the exact 90 day cadence a PE backed healthcare client used to stand up their first in house legal ops function. It is three pages. It tells you what to do in week one."

Proof is short. Proof is specific. Proof is the thing you can send in the body of an email that a busy person will actually read. Proof makes the prospect say, before the call, that you clearly understand the problem.

When you lead with proof, the call is no longer a sales conversation. It is a working session. The prospect arrives already trusting that you know their world. The only thing left to discuss is whether to work together.

The firms that cannot close the way they used to are almost always proof poor. They have forty case studies and zero proof. They are sending the library instead of the artifact.

> *The first time I led with proof instead of a pitch, I stopped losing deals I should have won.*

MANAGING PARTNER, MID MARKET CONSULTING FIRM

◆ ◆ ◆

Context Is the Multiplier

Signal gives you timing. Proof gives you credibility. Context is what makes the prospect open the email in the first place.

Context is the relationship record. The history. The shared past. The reason this message, from you, at this moment, is not an interruption.

Context can be direct. You worked together. You went to the same school. You sat next to them at a conference. You were introduced by someone they trust.

Context can be indirect. You share five mutual connections. You spoke at the same event. You both wrote about the same topic. Your firm served someone in their industry.

Context can be ambient. You have been in their ecosystem for a decade. They see your name in their feed. They have watched you build a point of view in public over time.

None of these produce a conversion on their own. But stacked with signal and proof, context is the multiplier. It is the reason the prospect does not scroll past your message. It is the reason they feel obligated, in the healthy sense of that word, to respond.

The Dead Zone is full of context. Every dormant contact in your CRM has context. The firm is throwing that context away every time it lets a relationship decay without ever stacking a signal and a proof onto it.

◆ ◆ ◆

The Math of the Formula

Every firm I have ever audited has thousands of contacts with real context sitting in a database no one touches. They are spending six figures a year generating new leads that have none of the three ingredients. And they wonder why the numbers are bad.

STAT 03.02

40x

the formula multiplier

Signal plus proof plus context outreach to existing relationships converts at 8.1%. Cold email in professional services converts at 0.2%. That is a 40 times multiplier on the same amount of effort.

Think about what that means for your week. Two hours spent on signal driven reactivation is worth 80 hours of cold outreach. Eight emails that carry the full formula will beat four hundred emails that carry none of it.

The firms that figure this out do not work harder. They work on the right side of the math.

◆ ◆ ◆

Your Next Client Already Knows You

If you take one thing from this chapter, take this.

Your next client already knows you.

Not might know you. Already knows you. The data says it. Every Discovery Session I have ever run confirms it. When I ask a firm to list the last ten deals they closed, eight of them came from someone who had been in the network for years. The other two came from someone who was one degree away from the network.

That is not a Mabbly finding. That is how professional services works. Always has. The illusion of the last decade was that the funnel could replace that reality. It cannot.

The formula works because it respects the truth. The truth is that the market you need to win is the market you have already earned. The job is not to find a new market. The job is to activate the one that already knows your name.

◆ ◆ ◆

What Breaks the Formula

The formula is simple. Simple does not mean easy.

Signal is hard because most firms do not have the discipline to watch the right inputs. They watch everything, so they see nothing.

Proof is hard because most firms have never forced themselves to produce a three page artifact that tells the prospect what to do in week one. They have brochures. They do not have proof.

Context is hard because most firms have let their relationship data decay for so long that when they want to reach out, they cannot remember the last conversation. The context exists. The record of the context is gone.

Fix all three and the formula prints. Leave any one of them broken and you are back in the funnel, sending cold messages to strangers, wondering why the phone is not ringing.

The next chapter shows you the five truths that make the formula work in practice. Without them, the formula is just a diagram.

CHAPTER AT A GLANCE

The Formula. Signal plus proof plus context equals response, not pitch. Every converting outbound message in professional services has all three. Every failing message is missing at least one.

Signal is a verb. It is the act of the market telling you a specific person, at a specific moment, is open to a conversation. Public signals beat dashboard noise every time.

Proof is not a case study. Proof is the specific artifact you can send in the body of an email that makes the prospect feel

understood before the call. Most firms are proof poor and do not know it.

Context is the multiplier. It is what makes your message worth opening. The Dead Zone is full of context your firm is throwing away every day.

The math. Formula driven outreach converts at 40 times the rate of cold email. Two hours on the right side of the math is worth 80 on the wrong side.

MONDAY MORNING TEST

Pick one dormant contact from your CRM. Someone you have not spoken to in 18 months or more. Someone who, if they called you tomorrow, you would take the meeting.

Now find the signal. LinkedIn. Their company news page. A podcast they appeared on. A recent hire on their team. Spend 10 minutes and write down the most recent thing that has happened in their world.

Now produce the proof. One page. Maximum two. What is the specific artifact you could put in front of them that speaks to the signal you just found? If you cannot produce it in 30 minutes, your firm has a proof problem worth fixing this quarter.

Now add the context. Open the message with one sentence that reminds them who you are and why this note is not random.

Send it. Then watch what happens.

PART ONE: THE PROBLEM

04

The Five Truths

Or, The Things Every Managing Partner Already Knows But Will Not Say Out Loud

A managing partner of a 60 person consulting firm sat across from me last fall and asked the question I have heard two hundred times.

"Which marketing tactic should we invest in next?"

He had a budget. He had a mandate from his board. He had three agencies on a shortlist. He wanted my opinion on which one to pick.

I told him none of them.

Not because the agencies were bad. They were fine. I told him none of them because he was asking the wrong question. Before he picked an agency, before he approved a plan, before he spent another dollar on his growth engine, he needed to admit five things about how his firm actually grew. Things his partners knew. Things his clients knew. Things he knew, in the part of his brain that still remembered the last ten deals he closed.

Without those five admissions, any agency he hired would spend his money doing the wrong work.

I have since watched dozens of firms try to shortcut this conversation. They hire the agency first. They approve the plan first. They buy the tool first. Then they spend two years wondering why the growth engine feels like it is pushing against gravity.

There is no shortcut. Before the system, the truths.

◆ ◆ ◆

The Five Truths

Every professional services firm that grows faster than its peers accepts these five truths. Every firm that stalls refuses to accept at least one of them.

They are not opinions. They are not my framework. They are what the data shows, what every Discovery Session I have ever run surfaces, what every managing partner eventually confesses around the third drink. They are the terrain underneath the map.

Here they are, in the order they need to be accepted.

I. Your next client already knows you.
II. Timing beats targeting.
III. Reputation is a GTM channel.
IV. The Dead Zone is your biggest GTM asset.
V. New relationships are earned through relevance.

The rest of this chapter is the unpacking. If you already believe all five, skip ahead. If you want to argue with even one, keep reading. The argument is the point.

◆ ◆ ◆

I. Your Next Client Already Knows You

Chapter 3 opened with this truth. It is the one that should offend you first, because it contradicts almost every dollar your firm has spent on growth for the last decade.

Your next client is not a stranger. They are not in the top of your funnel. They are not on a lead list a tool built for you. They are someone who has been in your orbit for years. A former client. A former colleague. A referral source. A board connection. Someone who heard you speak. Someone whose cousin used to work with you.

Every firm I audit confirms this. When I ask the partners to list their last ten closed deals and tell me where each one originated, the answer is always the same. Eight out of ten came from the network. The other two came from one degree away from the network.

The implication is blunt. If the network produced 80% of your last ten deals, the network should get 80% of your growth investment. Almost no firm does this. They spend on strangers and hope for relationships.

Accept this truth and the entire budget conversation changes.

◆ ◆ ◆

II. Timing Beats Targeting

Every firm is obsessed with targeting. The right vertical. The right company size. The right title. The right buying committee. Firms spend weeks building an ideal customer profile that looks like a zoning permit.

Targeting matters. Timing matters more.

The best prospect in the world, at the wrong moment, will not buy from you. The second best prospect in the world, at the right moment, will sign the contract this week.

Timing is the signal we talked about in Chapter 3. A new role. A funding round. A team expansion. A strategic pivot. A regulatory change. A personal milestone. Every one of those moments is a door that opens for a short window, then closes.

The firms that grow fastest are not better at targeting. They are better at timing. They have fewer targets and more discipline about when to engage each one.

If you are not investing in the infrastructure to watch timing, you are leaving the most valuable variable in the entire GTM equation on the floor.

◆ ◆ ◆

III. Reputation Is a GTM Channel

Most firms treat reputation as a side effect. Something that happens if the work is good. They do not budget for it. They do not manage it. They do not measure it. They certainly do not treat it as a channel.

It is a channel. It is the most durable channel you will ever have.

Reputation is what the market says about you when you are not in the room. It is what happens when a buyer types your name into a peer group chat and asks "anyone worked with these people?" It is what your last client told the person who was asking if you are worth the money.

Content is reputation. Speaking is reputation. The book the partner wrote is reputation. The podcast the firm hosts is reputation. The way the team shows up on LinkedIn is reputation.

> *"We used to think of content as marketing. We realized it is actually sales. Every proposal we send now lands inside a market that has already been reading us for two years."*

That was a managing partner at a 90 person strategy firm describing why their close rate doubled in 18 months. They did not change their sales process. They changed how they invested in reputation, and the sales process inherited the benefit.

If reputation is not in your GTM plan as a channel with its own budget and its own metrics, your plan is incomplete.

Before the system, the truths. Accept them or the system will not save you.

◆ ◆ ◆

IV. The Dead Zone Is Your Biggest GTM Asset

Chapter 1 named the Dead Zone. This is the truth hidden inside it.

The Dead Zone is not a problem. It is an asset. A big one. Bigger than your pipeline, your lead list, and your brand ad budget combined.

Every firm I have worked with has hundreds or thousands of contacts who met the firm, liked the firm, trusted the firm, and then quietly slid into dormancy because nobody was managing the relationship. The CRM has their email. The partners remember some of them. The last touch was often a warm one. The door was never closed. It was just left unattended.

Most firms treat that pool as a failure. They should treat it as an inventory.

STAT 04.01

60%

dormant but warm

Of dormant professional services contacts will take a meeting within 30 days of a relevant, well timed outreach. The Dead Zone is not a graveyard. It is a paused conversation.

A firm with 400 dormant contacts is not a firm with a marketing problem. It is a firm with 400 meetings it has not booked yet. The difference between a stalled firm and a growing firm is often nothing more than whether the partners treat that inventory as a growth lever or as an embarrassment to ignore.

Accept Truth IV and the Dead Zone becomes the first place you look for revenue. Reject it and the Dead Zone continues to be the silent drag on every quarter.

◆ ◆ ◆

V. New Relationships Are Earned Through Relevance

You still need new relationships. The network is not enough forever. At some point, every firm needs to attract people who have never heard of it.

The question is how.

The answer every agency will sell you is scale. Run more ads. Send more cold emails. Buy more data. Cast a wider net. Generate more MQLs. Sometimes it works. Usually it does not. And when it does work, the new relationships are shallow. They take twice as long to close and they churn twice as fast.

The answer that actually compounds is relevance.

New relationships are earned through relevance. Through publishing a point of view the market needs. Through showing up in the specific rooms your buyers are in. Through producing proof that reads like it was written for the exact person you want to meet. Through being so clearly useful on a specific problem that the right strangers find you because they were looking for what you offer.

Relevance is slower than scale for the first six months. It is faster than scale for the next six years.

The firms that pick relevance build a flywheel. The firms that pick scale build a treadmill.

◆ ◆ ◆

What You Do With These Truths

None of these truths are new. You have probably heard some version of each of them before.

The surprise is not the content of the truths. The surprise is what happens when you accept all five together as the foundation of a system. Because once you do, you have to

admit that almost every GTM investment you have made for the last five years was pointed at the wrong thing.

That is the hard part. Not the learning. The unlearning.

The managing partner I opened this chapter with got there eventually. It took two sessions. In the end he did not hire any of the three agencies. He hired a relationship architect, funded a Dead Zone reactivation sprint, and invested in a thought leadership engine that the partners actually ran. Eighteen months later the firm grew 40% without adding a single new logo from cold outbound.

Every truth in this chapter was already operating inside his firm. He was just investing against them instead of with them.

The next chapter is where we stop describing the truths and start showing you the system that aligns with all five. The Five Orbits. That is where the Relationship Revenue OS begins to run.

CHAPTER AT A GLANCE

Truth I. Your next client already knows you. Eight of your last ten deals came from the network. Invest your budget where the revenue actually comes from.

Truth II. Timing beats targeting. The best prospect at the wrong moment will not buy. The second best prospect at the right moment will. Watch timing, not lists.

Truth III. Reputation is a GTM channel. Treat it like one. Budget for it. Measure it. Content, speaking, and POV are not marketing. They are sales infrastructure.

Truth IV. The Dead Zone is your biggest GTM asset. A firm with 400 dormant contacts is a firm with 400 meetings it has not booked. Inventory, not embarrassment.

Truth V. New relationships are earned through relevance. Scale builds a treadmill. Relevance builds a flywheel.

MONDAY MORNING TEST

Read each of the five truths out loud to your leadership team.

For each one, ask two questions. First, do we believe it? Second, does our current spend reflect that we believe it?

You will find at least one truth where your team agrees in principle but your budget disagrees in practice. That gap is the single most expensive thing in your firm right now.

Close it before you approve another dollar of growth spend.

PART TWO: THE SYSTEM

05

The Five Orbits

Or, The Map Your Firm Is Already Operating On, Whether You Drew It or Not

I asked a CMO to pull up her last twelve months of growth spend. She did. I asked her to tell me, for each line item, which orbit it served.

She looked at me like I had switched languages. I had.

I drew five circles on the whiteboard. Concentric rings. The innermost tiny, the outermost huge. I labeled them. Then I asked her again. Each line in her budget. Which ring.

By the end of the exercise she had put 81% of her annual growth budget on the outermost ring. 4% on the innermost. The firm's actual revenue, when we looked at the deals that had closed that year, came from the opposite direction. 78% of closed revenue traced to the inner two rings. 4% traced to the outer one.

She sat back. "We have been subsidizing the wrong part of our own map for a decade."

That is the moment every Discovery Session eventually arrives at. The firm is not bad at growth. The firm is investing in the wrong orbit.

◆ ◆ ◆

Orbits, Not Funnels

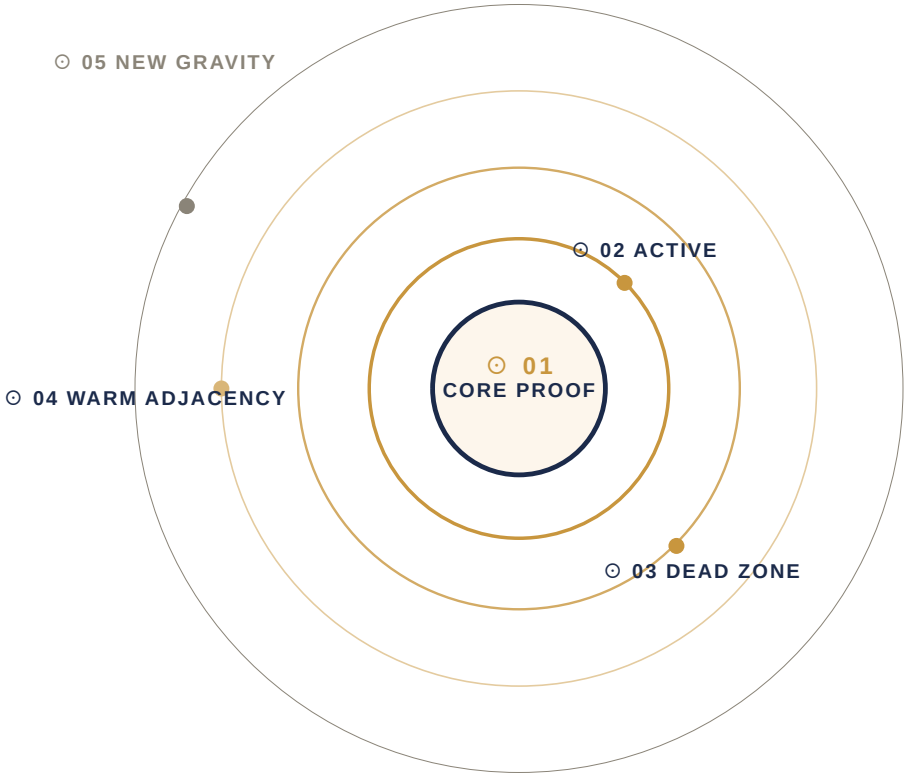
A funnel is a line. A stranger enters at the top. A customer exits at the bottom. Motion is one direction. People who do not convert fall out of the system.

That is not how professional services growth actually behaves. Professional services growth is orbital. People enter at different distances. They move closer over time, sometimes faster, sometimes slower. They drift farther if the firm neglects them. They can live in an orbit for years before a single signal pulls them into the core.

The right map for professional services is not a funnel. It is a set of concentric rings, each with its own rules, its own economics, and its own motion.

There are five.

The Five Orbits



Every contact lives in exactly one orbit. Motion is the job. Inward on purpose. Outward only when necessary.

Every contact in your firm's universe lives in exactly one orbit at any moment. Orbits are not categories. They are positions. Positions change.

The inner orbits are people who already trust you. The outer orbits are people you are earning trust from. The goal of the system is not to fill the funnel. The goal is to move

people inward, and to keep the inner orbits warm so they compound.

Here is what lives in each.

◆ ◆ ◆

⊙ 01 Core Proof

Your top 15 to 20 relationships. The people who refer you without being asked. The former clients who still email when they need a reality check. The colleagues who carry your name into rooms you are not in.

This orbit is small on purpose. Core Proof is not a segment. It is a list you should be able to recite from memory. If your firm has 80 people in Core Proof, you do not have Core Proof. You have a Rolodex.

Core Proof is the foundation. Every other orbit inherits credibility from this one. When Orbit 04 references a name they heard you served well, that name lives in Orbit 01. When Orbit 03 reactivates because a dormant contact remembered a conversation that mattered, that conversation was with someone in Orbit 01.

The economics are simple. Core Proof costs almost nothing to maintain and produces more revenue, directly and indirectly, than every other orbit combined. Most firms underinvest in Core Proof because it feels free. It is not free. It is earned, and it decays if left alone.

◆ ◆ ◆

⊙ 02 Active

People you have spoken to in the last 90 days with mutual value. A current client you are delivering work for. A

prospect in an open conversation. A peer who replied to your last email with substance. A referral source who is circulating your name right now.

Orbit 02 is where most firms' CRM data actually lives. It is the layer of real conversations, open threads, live momentum.

The rule of Orbit 02 is the 90 day decay window. If you do not have a meaningful touch inside 90 days, the contact slides to Orbit 03. Not because they stopped liking you. Because life moves, priorities shift, and the conversation goes cold.

Firms that protect Orbit 02 well do one unglamorous thing. They build a cadence. They know who is at 60 days. They know who is at 80. They move before 90 because the cost of prevention is a tenth of the cost of reactivation.

Firms that do not protect Orbit 02 watch it bleed into Orbit 03 every quarter, and then pay cold outbound agencies to win back the relationships they had last year.

◆ ◆ ◆

⊙ 03 Dead Zone

Sixty to eighty percent of your CRM. The dormant pool. The contacts who met the firm, liked the firm, trusted the firm, and then went quiet because nobody kept the relationship alive.

Chapter 1 named the Dead Zone. Truth IV admitted it is an asset. This is the orbit that holds it.

Most firms treat Orbit 03 as a graveyard. It is not. It is a paused conversation. 60% of dormant professional services contacts will take a meeting within 30 days of a relevant, well timed outreach. That is not a reactivation campaign. That is a dormant inventory waiting for the right signal.

STAT 05.01

70%

investment inversion

The highest performing professional services firms invest 70% of their growth budget in Orbits 01 through 03. The average firm invests 70% in Orbit 05. The inversion is the single biggest budget mistake in the category.

Activating Orbit 03 is the single fastest way to produce revenue in a firm that feels stuck. It requires no new leads, no new marketing, no new category. It requires signal, proof, context, and the discipline to actually send the message.

◆ ◆ ◆

⊙ 04 Warm Adjacency

One degree removed. The network of your network. People referral adjacent, event adjacent, content adjacent. They are not in your database yet. They are inside someone else's.

This is the orbit of borrowed trust. A mutual connection introduces you. A client invites you to a private dinner. A

podcast you appeared on drives a DM. A LinkedIn post you wrote surfaces a comment from someone you had never met.

Orbit 04 has a brutally narrow time window. Peak effectiveness is seven days after the signal. Optimal is 48 hours. After that, the borrowed trust decays and you are back to cold outreach.

The firms that dominate Orbit 04 have one habit. They move fast. The warm intro email goes out the same afternoon. The LinkedIn DM goes out the same day. The follow up to the podcast appearance is in the inbox before the episode drops.

Everything Orbit 04 produces is time sensitive. Treat it like a stock that expires.

A funnel asks where your strangers are. An orbital system asks where your relationships are.

◆ ◆ ◆

⊙ 05 New Gravity

The outermost ring. Cold outbound. Paid media. Events where you do not know anyone. Inbound from content that reaches net new audiences. SEO. Every growth channel that starts with the assumption that the buyer has no relationship with you yet.

Orbit 05 is not bad. Every firm needs some of it. The illusion is that Orbit 05 should be the first place you invest, not the last.

It is the last. It has the highest cost per meeting, the lowest trust, and the longest conversion cycle of any orbit. It only works when the inner orbits are functioning, because when an Orbit 05 prospect checks you out before replying, they are looking at the signal your inner orbits are producing. Your content. Your testimonials. Your LinkedIn presence. Your reputation.

An Orbit 05 meeting is expensive. A stranger with no other proof costs three to five times more to convert than an Orbit 03 reactivation. Firms that run Orbit 05 well build a proof engine first, then turn on the stranger taps.

Firms that run Orbit 05 poorly buy a list, hire an SDR, and wonder why nothing is closing.

◆ ◆ ◆

The Motion

Orbits are positions. Positions change. Every week, dozens of people are moving between them.

A client engagement ends. That person slides from Orbit 02 to Orbit 03 unless you have a cadence to keep them warm. A referral source circulates your name in a new firm. That firm enters Orbit 04. A cold outreach from Orbit 05 lands, the prospect takes the meeting, now they are in Orbit 02. A dormant contact from Orbit 03 resurfaces because of a signal, they move back into Orbit 02 after the conversation.

The job of the system is to manage this motion deliberately. Inward when possible. Outward only when necessary. The firms that compound are not the firms with the most

contacts. They are the firms with the most relationships moving inward on purpose.

The rest of this book is about how.

◆ ◆ ◆

Why This Changes the Budget

The CMO I opened this chapter with was not a bad marketer. She was a marketer trained on a funnel model applied to a business that runs on orbits. When she saw the map, she did not need a new marketing plan. She needed a new allocation.

She shifted 35% of Orbit 05 spend into Orbit 03 reactivation and Orbit 02 nurture. She built a Core Proof program for her top 18 relationships. She hired one person whose only job was Orbit 04 speed.

Four quarters later, her cost per meeting was down 60% and her close rate was up 18 points. She did not add a channel. She stopped funding the wrong one.

The orbits are not theory. They are the map your firm is already operating on, whether you drew it or not. The question is whether you are going to invest against the map or keep paying to work against it.

The next chapters show you how to run each orbit on purpose. We will start with the inner ones, where the leverage is highest, and work outward.

CHAPTER AT A GLANCE

Orbits, not funnels. Professional services growth is orbital. Five concentric rings, each with its own rules, economics, and motion. Every contact lives in exactly one orbit at a time.

⊙ **01 Core Proof.** Top 15 to 20 relationships. Referers without being asked. The foundation every other orbit inherits credibility from.

⊙ **02 Active.** Live conversations inside the 90 day window. Protect it with a cadence or it bleeds into Orbit 03 every quarter.

⊙ **03 Dead Zone.** 60 to 80% of your CRM. Dormant, not dead. The single fastest source of revenue for a stalled firm.

⊙ **04 Warm Adjacency.** One degree removed. Borrowed trust. 48 hour optimal window. Move fast or lose it.

⊙ **05 New Gravity.** Strangers. Highest cost per meeting. Only works when the inner orbits are funded first.

The allocation. High performing firms invest 70% of budget in Orbits 01 through 03. Average firms invest 70% in Orbit 05. The inversion is the single biggest budget mistake in the category.

MONDAY MORNING TEST

Pull your last twelve months of growth spend. Categorize every line item by which orbit it serves.

Now pull your last twelve months of closed revenue. Categorize every deal by which orbit it came from.

Lay the two pie charts next to each other.

If the revenue chart and the spend chart do not match, you have found the single largest lever in your firm. Fix the allocation before you fix anything else.

PART TWO: THE SYSTEM

06

⊙ 01 Core Proof

Or, The Eighteen People Who Decide How Much Everything Else Costs

I asked a managing partner for his top twenty names. He paused. He said, “Give me five minutes.”

Forty minutes later he came back with a list of thirty one. Half of them were people he had not spoken to in over a year. Two of them were dead.

This was a forty six million dollar firm. Those thirty one people had produced, by his own estimate, two thirds of the firm's closed revenue across the last decade. And he could not name them without a forty minute search through his inbox.

He is not an outlier. He is the average.

◆ ◆ ◆

Who Lives in Orbit 01

Three tests decide if a contact belongs in Core Proof. All three, not two. The discipline of the small list is what makes it compound.

One. They refer you without being asked. Not because they owe you, not because you nudged, but because your name surfaces in the rooms they sit in and they put it forward.

Two. They would take your call within 24 hours. Not tomorrow. Not next week. Not "let me check my calendar." Within a day.

Three. You have produced real work for them, or alongside them, and they remember the substance of it. Not the logo. Not the deck. The substance.

If all three, they are Orbit 01. If only two, they live in Orbit 02 and they are not yet Core Proof. Be strict. A long list of people who sort of qualify is not Core Proof. It is a Rolodex with a higher opinion of itself.

The right number is 15 to 20. Not 50. Not 100. Not every name you have shaken hands with at a conference. If you are running a firm and your Core Proof list exceeds twenty,

you are not running Core Proof. You are running a contact database and calling it a relationship program.

◆ ◆ ◆

Why Core Proof Compounds

Every other orbit borrows from this one.

The warm introduction that lands in your inbox (Orbit 04) works because the person making the introduction is in Orbit 01. The dormant contact you reactivate (Orbit 03) comes back because they remember a specific person from Orbit 01 who vouched for you years ago. The cold outbound prospect (Orbit 05) replies to your email because they checked your LinkedIn and saw three Orbit 01 names liking your posts and leaving substantive comments.

Your Core Proof is the gravitational mass that pulls every other orbit inward. It is the only orbit that produces energy for the other four.

This is why firms that neglect Core Proof experience what feels like a general slowdown across every growth channel simultaneously. The referrals dry up. The intros slow down. Cold outbound stops converting. The firm blames the market, hires an agency, runs a campaign. None of it works because the gravitational center is dimming.

STAT 06.01

12x

core proof compound rate

Across 82 managing partner interviews, a Core Proof relationship produced 12 times the direct and indirect revenue of the average CRM contact over a five year window.

◆ ◆ ◆

How Core Proof Decays

Slowly. Silently. In ways that do not look like neglect because they look like normal business.

A partner retires. Your Core Proof list loses one. You do not notice because the firm still has a hundred other relationships.

A client's priorities shift. They stop needing the service line you are strongest in. Your Core Proof list loses another. You do not notice because the relationship still exists, just dormant.

A former CMO moves to the buy side and you never follow the career change. Your Core Proof list loses another.

You do not notice because your contact data still lists their old email.

Six months later, the firm's pipeline is down 30%. The managing partner convenes a growth meeting. The team analyzes the content calendar, the outbound cadence, the conversion rates, the close rates. Nobody looks at the list of three Core Proof relationships that quietly stopped existing.

Core Proof does not die in a storm. It erodes in a drought.

> *If you cannot name your top eighteen in five minutes, you do not have Core Proof. You have a Rolodex with a higher opinion of itself.*

◆ ◆ ◆

The Core Proof Ritual

The cadence that keeps Core Proof alive is boring, deliberate, and unglamorous. It is also the single highest ROI activity inside a professional services firm.

Three layers.

Monthly, a personal touch with no ask. A relevant article you thought of them when you read. A check in about something real in their life. A book recommendation. A comment on a post they wrote. Nothing transactional. Nothing pitching. One touch per contact per month.

Quarterly, a value drop. Something genuinely useful about their world, not yours. An analysis you ran. A connection you are making between them and someone they should know. A signal you noticed in their industry. The test for a good quarterly value drop is that it would still have value to them if you never worked together again.

Annually, an in person conversation. Dinner. An event. Coffee when you travel through their city. The annual in person is what converts Core Proof from a maintained list into a deepening relationship. A list you maintain is asset preservation. A list you deepen is asset compounding.

The ratio to hold inside your head is simple. Three gifts for every ask. If your last three touches with a Core Proof contact were all asks, disguised or not, you have broken the ritual. You are now extracting from the relationship instead of investing in it.

◆ ◆ ◆

Why Firms Underinvest Here

Three reasons, all the same reason.

It does not look like marketing. There is no line item in the budget called "protect Core Proof." There is no dashboard for it. There is no vendor pitching it. So when the CFO asks where to cut, the unlabeled work disappears first, because unlabeled work always disappears first.

It does not attribute. When a Core Proof contact refers a new client two years after a conversation at dinner, the CRM logs the deal as "referral" and nobody asks which relationship the referral came from. The partner who has been quietly tending Core Proof gets no credit. The agency that sent the cold outbound email gets credit for a meeting that was going to happen regardless.

It feels free. It is not. The time of the partner who protects Core Proof is the most expensive time in the firm. Firms that treat it as free watch it erode, then pay outbound agencies three to ten times the cost to rebuild relationships they already had. Firms that recognize it is the most expensive thing in the firm protect it like the asset it is.

◆ ◆ ◆

The Economics, Inverted

Run the numbers once and the shape of the business changes.

A Core Proof relationship, protected, costs a few hours per quarter of partner time. Across a year, that is eight to twelve hours. That relationship, over five years, produces on average 1.4 direct engagements, 3 referrals, and a speaking slot or case study that feeds content for the other orbits.

A cold outbound stranger, if you are running Orbit 05 well, costs somewhere between $800 and $3,000 per meeting. To produce the same set of outcomes as one Core Proof relationship (1.4 engagements, 3 referrals, proof material), you need roughly 40 meetings across 18 months. That is $32,000 to $120,000 in direct outbound cost, not counting the partner time consumed by meetings that go nowhere.

The economics are not close. They are not in the same magnitude. An hour spent on Core Proof is worth somewhere between 50 and 300 times an hour spent on Orbit 05.

This is the math no growth meeting ever runs, because nobody can find the numbers. The numbers are there. They are just not in anyone's spreadsheet.

CHAPTER AT A GLANCE

⊙ 01 Core Proof. Your top 15 to 20 relationships. Not 50. Not 100. A list you should be able to recite from memory.

The three tests. Refers you without being asked. Takes your call within 24 hours. Remembers the substance of real work. All three, or they are not Core Proof.

Why it compounds. Every other orbit inherits credibility from this one. Core Proof is the gravitational mass that pulls every other ring inward.

How it decays. Slowly and silently. A partner retires. A client shifts. A CMO moves jobs. Three losses can erase a quarter of pipeline two years later.

The ritual. Monthly personal touch, no ask. Quarterly value drop. Annual in person. Three gifts for every ask.

Why firms underinvest. It does not look like marketing, does not attribute, and feels free. It is none of those things. It is the most expensive and most valuable asset the firm owns.

MONDAY MORNING TEST

Close your laptop. Open a blank document. Set a five minute timer. Write, from memory, the names of your top eighteen Core Proof relationships.

If you get past twelve, you have a program.

If you get to ten, you have a start.

If you stall at seven, you have a Rolodex.

If you cannot get to five, the rest of this book is not the problem.

Then do it again in thirty days. If the list is meaningfully different, you do not have Core Proof. You have a moving list of favorites. The whole point of Core Proof is that it is stable, deliberate, and deeply protected.

PART TWO: THE SYSTEM

07

⊙ 02 Active

Or, The 90 Day Cliff Every Firm Walks Off

A partner told me his firm had 240 active relationships. I asked him to sort the list by last contact date.

By the time we hit day 95, we had removed 111 names. The "active" list had been the fiction the firm told itself to avoid

looking at the real one. Most of those 111 were not lost clients or cold prospects. They were people the firm had talked to six months ago with real momentum, and nobody had bothered to call since.

That firm was not unusual. Across every Discovery Session I have run, somewhere between 40 and 60 percent of what the firm calls "active" is actually dormant. The list tells you about the firm's self image. The dates tell you about its behavior.

◆ ◆ ◆

What Active Actually Means

Orbit 02 is not a list of people you like, intend to call, or remember fondly. Orbit 02 is the narrow slice of your universe where a real conversation has happened in the last 90 days with mutual substance on both sides.

Two filters. One, substantive. A "happy birthday" automated email does not count. A one line "following up" does not count. The touch has to carry content the other person will remember in a week.

Two, recent. Ninety days. Not 100. Not "a few months ago." Ninety.

If the last substantive touch was 91 days ago, the contact is not Orbit 02 anymore. They are sliding toward Orbit 03. The slide is not a metaphor. Every study of professional services relationship decay shows the same curve. Ninety days is where mindshare begins to fall off a cliff.

◆ ◆ ◆

Why Ninety

Three reasons converge at the ninety day mark.

The first is attention. A busy executive rotates their active thinking about external relationships on roughly a quarterly cycle. After ninety days, they are not ignoring you. They have simply rebuilt their mental map of who is currently relevant, and you are no longer on it.

The second is priority shift. Most professional services buyers reassess their priorities at the start of each quarter. Something that mattered in March may not matter in June. If you have been silent from March to June, you are not missing a touchpoint. You are missing a change in the market.

The third is signal cost. The longer you are silent, the more you need to say when you come back. A reactivation email from a contact who has been quiet for seven months costs ten times the effort and feels ten times heavier than a quarterly touch from someone who has stayed visible.

◆ ◆ ◆

The Cadence Triangle

Firms that protect Orbit 02 run a three stage alert inside their relationship system. The numbers are deliberate.

Day 30. A passive signal. The contact appears in a dashboard of “recent but not urgent” relationships. No action required yet, but the clock has started.

Day 60. An active signal. Someone on the team is responsible for reviewing this contact and deciding on the next touch. If nothing relevant is happening, a simple value drop goes out. If something is happening in their world, the touch is calibrated to that.

Day 80. A hard alert. The contact is ten days from sliding into Orbit 03. The touch happens this week, no exceptions.

This is the most important alert in the system and also the one most firms ignore, because it requires acting before the problem feels urgent.

The economics of the triangle are simple. Touching at day 30 costs almost nothing. Touching at day 60 is a standard quarterly motion. Touching at day 80 saves the relationship. Rebuilding at day 180 costs ten times as much as any of them.

STAT 07.01

10x

prevention cost vs reactivation cost

A professional services relationship protected with a cadence at day 80 costs roughly one tenth of what it costs to reactivate the same contact once they have crossed 180 days of silence.

◆ ◆ ◆

What Counts as a Touch

Not every email is a touch. Not every touch counts.

A mass newsletter with a generic subject line is not a touch. A one liner asking “any updates?” is not a touch. A LinkedIn auto invitation is definitely not a touch.

A touch, in the Orbit 02 sense, is a message that demonstrates three things. You know what is happening in their world. You have something useful to offer about it. You are not asking for anything in return on this particular outreach.

Touches that qualify include. A short note referencing a specific move in their industry, with a relevant thought. A quick introduction to someone they should know, offered without expectation. A tailored piece of content you genuinely think speaks to their current problem. A direct invitation to a private conversation where they will benefit more than you will.

Touches that do not qualify. Anything automated without review. Anything that mentions your firm in the first sentence. Anything that ends with a calendar link. Anything that could have been sent to a hundred other people.

The 80 day alert is the cheapest email you will ever send and the most expensive one you will ever ignore.

◆ ◆ ◆

Why Firms Lose Orbit 02 Every Quarter

Most firms do not lose Orbit 02 deliberately. They lose it because the cadence never became a ritual.

The pattern is predictable. In Q1, the firm is motivated. A growth push produces ten new Orbit 02 relationships. In Q2, the firm is busy delivering the work those relationships produced. No one has time to touch the next wave. By Q3, thirty or forty of those contacts have slid to Orbit 03. The firm now runs a Q4 "reactivation campaign" and pays an agency to rebuild the relationships it lost in Q2.

This is not a strategy problem. It is a calendar problem. The cost of protecting Orbit 02 is roughly four hours a week for a midsize firm. The cost of replacing Orbit 02 is roughly four weeks of outbound work and thousands of dollars per contact. The math is obvious and almost no one runs it.

The firms that protect Orbit 02 do one unglamorous thing. They put the cadence on a calendar and they refuse to move it. Every Friday morning, someone owns reviewing the alerts. Every Friday afternoon, the touches go out. The meeting is boring. The meeting is the system.

CHAPTER AT A GLANCE

⊙ **02 Active.** Substantive contact within 90 days on both sides. Everything else is mislabeled.

The 90 day cliff. Attention rotates quarterly. Priorities shift quarterly. After 90 days, you are rebuilding from silence, not maintaining from momentum.

The cadence triangle. Day 30 passive, day 60 active, day 80 hard alert. The day 80 touch is the single most valuable email the firm will send that month.

What counts as a touch. Substance about their world, offered without asking for anything back. Everything else is noise.

Cost of prevention vs reactivation. Roughly one tenth. Firms pay the full price because the cheap move feels optional until it is too late.

MONDAY MORNING TEST

Open your CRM. Sort your relationship list by last substantive contact date.

Count how many contacts you have between 60 and 89 days. This is your Orbit 02 at risk population.

Send a real touch to at least five of them this week. A touch that would pass the three tests. Substance, relevance, no ask.

Then schedule 30 minutes every Friday to do the same next week and the week after that. If you can hold that cadence for 12 weeks, you have an Orbit 02 program. If you cannot, the rest of the system will not save what you are about to lose.

PART TWO: THE SYSTEM

08

⊙ 03 Dead Zone

Or, The Largest GTM Asset Nobody Knows They Own

A partner I work with tested one question for thirty days. He sent it to forty seven people who had not heard from his firm in over a year.

Six came back. Three of them closed work. The total lift was just under four hundred thousand dollars. The total cost was

one afternoon of writing emails and the courage to hit send on something that did not look like a pitch.

He told me afterward that the hardest part was not the writing. It was the quiet conviction he had to hold that these forty seven people were not actually dead. His CRM had flagged them as cold. His outbound team had written them off. His partners had forgotten most of them. And yet the math of professional services relationship decay says most of them were sitting there waiting to be asked the right question.

This is the orbit the book opened with. Now it is the orbit the book gives you permission to go after.

◆ ◆ ◆

Why the Dead Zone Is Misunderstood

Most firms treat Orbit 03 as a graveyard. The CRM bucket is labeled “cold,” “dormant,” or “lost.” Sales ops runs a quarterly purge to remove contacts who have not engaged in 12 months. Marketing removes them from campaigns to protect sender reputation. Over time the list gets shorter, cleaner, and emptier of value.

This is the wrong move. The Dead Zone is not a graveyard. It is a paused conversation. The difference between dormant and dead is not the contact’s interest in you. It is whether anyone has given them a reason to reengage on their terms.

The data on professional services reactivation is consistent across every firm we have studied. Between 40 and 65 percent of dormant contacts will take a meeting within 30 days of a relevant, well timed outreach. These are not leads. They are pauses. They have memory of your firm, residual

trust, and in most cases, a pending problem they have not yet solved.

STAT 08.01

60%

dormant awakening rate

60% of dormant professional services contacts will take a meeting within 30 days of a relevant, well timed outreach. The trigger is never the message alone. It is the signal the message carries.

◆ ◆ ◆

The Signal Requirement

A reactivation outreach without a signal is just a pitch to someone who is not expecting one. It will fail.

A reactivation outreach with a signal is a service. It will land.

The signal is the thing that happened in their world that justifies the message. A promotion. A funding round. A

hire. A new office. A regulatory change in their industry. A podcast they appeared on. A talk they gave. A blog post they wrote. A change at a competitor.

The signal is not a pretext. It is the actual reason you are reaching out. If the signal is weak or manufactured, the recipient will smell it within three sentences and the relationship, already fragile, will take another hit.

The best signals share three traits. They are specific, so the contact knows you actually paid attention. They are recent, so the relevance is obvious. They are rare, so the touch feels like it came from a human who noticed, not a tool that scraped a feed.

◆ ◆ ◆

The Anatomy of a Reactivation Email

The formula from Chapter 3 applies with special force here. Signal + Proof + Context = Response, not Pitch.

Signal first. Lead with what you noticed. Make it specific enough that the contact knows you are not running a sequence. Two sentences maximum.

Proof second. Connect what you noticed to something your firm has done, seen, or solved. Not a brag. A concrete, relevant reference point. Two or three sentences.

Context third. Offer something the contact can actually use, independent of whether they ever buy from you. A thought. An introduction. A resource. One sentence.

Close with a soft, specific ask. Not “let’s catch up.” Something that either advances a conversation with a clear yes or no, or offers a trivially easy response option. One sentence.

Five sentences total. Under 120 words. Sent from a real address, not a platform. No calendar link in the first outreach. No tracking pixels.

A dormant contact is not a dead contact. It is a paused conversation waiting for the right signal to resume.

◆ ◆ ◆

What Not to Say

The phrases that kill a reactivation outreach are the phrases most firms default to.

"Just checking in" signals that nothing specific prompted you. It is the opening sentence of a pitch that is about to fail.

"I wanted to circle back" signals that you are returning to an earlier agenda item they did not care enough about to respond to. It reminds them of the moment they ghosted you.

"It has been a while" signals that your own awareness of the gap is what is driving the outreach, not anything about them. It asks them to feel guilty for not replying. They will not.

"I thought of you" is fine, but only if the next sentence specifies exactly what prompted the thought. Without that, it is a pleasantry, and reactivation cannot be built on pleasantries.

Reactivation messages that work almost always start with the signal, not with your own awareness or your own feelings about the gap. Lead with them. Make the first three words be about their world, not yours.

◆ ◆ ◆

The Dead Zone Program

Running Orbit 03 well is a program, not a campaign.

A program targets twenty to forty dormant contacts per quarter, chosen deliberately. Each one gets researched for a relevant signal. Each one gets a custom, signal led outreach. Each one is logged. Each response is tracked.

The conversion math looks like this. Of forty sends, expect fifteen responses and six to eight real conversations. Of those, two to three will produce scoped engagements. The cycle time is typically 30 to 90 days from first send to signed work.

Run four of these cycles a year. At the low end, that is eight engagements from a population your firm had already written off. At the high end, it is twelve or more. In either case, it is the highest return activity inside the entire Part Two system, and it requires no new leads, no new marketing spend, and no new hires.

CHAPTER AT A GLANCE

⊙ **03 Dead Zone.** 60 to 80% of your CRM. Dormant, not dead. A paused conversation waiting for a reason to resume.

The 60% rule. A majority of dormant professional services contacts will take a meeting within 30 days of a relevant, well timed outreach.

The signal requirement. No signal, no send. The signal is the reason, not a pretext.

The anatomy. Signal, proof, context, soft ask. Five sentences. Under 120 words. Real address, no tracking.

The program, not the campaign. Twenty to forty sends per quarter, tracked. Expect 6 to 8 conversations and 2 to 3 scoped engagements.

What not to say. "Just checking in." "Circling back." "It has been a while." All three announce that you have nothing to say.

MONDAY MORNING TEST

Open your CRM. Pull a list of 20 contacts who have not been touched in 9 to 18 months but who were once in an active conversation with your firm.

Pick five of them. For each, spend ten minutes researching what has changed in their world in the last 60 days. You are looking for one specific signal.

Write five emails. Signal first. Under 120 words. No calendar link. Send them today.

Track responses over the next 30 days. If at least one converts to a real conversation, you have the evidence you need to build a Dead Zone program. If three convert, you have already outperformed the campaign your firm would have run with an outside agency at ten times the cost.

PART TWO: THE SYSTEM

09

⊙ 04 Warm Adjacency

Or, The Orbit With Two Clocks

A mutual friend introduced me to a CMO at a four hundred million dollar firm. The intro was generous. She was the exact profile I had been trying to reach for eight months. I replied six days later.

Polite. Thoughtful. Well written. Too late.

She had already moved on to the ten other things competing for her attention that week. My reply never got a response. The intro had been warm when it landed. By the time I acted on it, it was cold. The relationship did not fail because my message was weak. It failed because I respected my own calendar more than I respected the clock the intro was running on.

That is the pattern that defines Orbit 04. Every warm introduction has two clocks. The clock on the relationship is long. The clock on the trust is short.

◆ ◆ ◆

What Orbit 04 Actually Is

Warm Adjacency is the set of people one degree removed from your known network. They are not in your CRM yet. They are inside someone else's.

Three sources produce Orbit 04 contacts.

The warm introduction. A person in your Orbit 01 or Orbit 02 reaches out and connects you with someone in their network. The introduction carries a portion of their credibility. That credibility is the asset, and it decays quickly.

The content surface area. Someone reads a LinkedIn post you wrote, a podcast you appeared on, or an article you published. They comment, message, or quietly check you out. The trust is weaker than a direct introduction but real.

The shared room. You appear together at a dinner, a conference, a client meeting, a board. The context of the shared room gives you a permission slip to follow up that you would not have had five minutes before the room existed.

All three produce Orbit 04 contacts. All three have short windows.

◆ ◆ ◆

The 48 Hour Rule

The data is consistent. A warm introduction or adjacent touch converts at dramatically different rates depending on how fast you move.

Replying to a warm introduction within 24 hours produces a conversion rate roughly six times higher than replying within seven days. Sending a follow up to a podcast appearance within 48 hours produces roughly four times the engagement of the same message sent a week later. Responding to an Orbit 04 LinkedIn comment within an afternoon produces meaningful dialogue. The same response the following week produces a pleasantry.

The reason is not mystical. Humans assign trust to the people who show up on their time. When a warm intro lands, the connector has invested their own credibility. They are now watching, consciously or not, to see whether you treat the intro like the gift it is. Speed is how you honor the gift. Delay tells the connector that you did not.

STAT 09.01

6x

speed advantage

Responding to a warm introduction within 24 hours produces a 6 times higher conversion rate than responding within 7 days. The trust decays on a curve, not a cliff, but the steepest portion of the curve is the first 72 hours.

◆ ◆ ◆

How to Move Fast Without Looking Desperate

Speed without craft looks like desperation. Speed with craft looks like respect.

The difference is preparation. Firms that dominate Orbit 04 do not write the reply to a warm intro in the moment. They have already worked out the structure. The template in their head is simple enough to adapt in under ten minutes and specific enough that every reply feels personal.

The structure for a warm intro reply.

Thank the connector in one short line, and do it on a separate exchange if the intro was direct. Move them off the thread so the real conversation can begin.

Acknowledge the recipient by name and by one specific thing about their work or their firm. This is the respect signal.

Offer a concrete reason for the next conversation. Not “I would love to chat.” A specific thought, a specific question, a specific resource you think they will find useful.

Propose two or three specific times for a 20 minute conversation, or include a link to your calendar if the relationship is warm enough. Keep the ask small. Twenty minutes, not an hour.

Close with a single sentence that makes it easy to decline. “No pressure if the timing is off, I will stay in touch either way.” The psychological permission to say no is what makes them more likely to say yes.

◆ ◆ ◆

The Hand Back Rule

Every warm introduction creates a debt to the connector. The debt is not money. It is visibility.

The connector wants to know two things. One, that you handled the introduction well. Two, that the investment of their credibility produced something real.

The hand back is simple. Within two weeks of the introduction, send the connector a short update. One line if nothing happened. Two lines if a conversation did happen. A real thank you if something concrete came from it. Offer to return the favor proactively, with a specific name or resource, not a vague “let me know how I can help.”

The firms that build the deepest Orbit 04 pipelines do this religiously. The hand back is not a courtesy. It is the mechanism that tells the connector to keep sending introductions. Without it, the flow dries up quietly over six to twelve months. With it, the flow accelerates, because every closed loop teaches the connector that their referrals produce both results and gratitude.

Every warm introduction has two clocks. The clock on the relationship is long. The clock on the trust is short.

◆ ◆ ◆

Systematizing Orbit 04

Orbit 04 is the hardest orbit to systematize because the inputs are unpredictable. You cannot schedule a warm intro. You cannot force someone to comment on your LinkedIn post. You cannot manufacture a chance dinner seating.

What you can do is prepare for them.

Set one rule. Every warm intro or adjacent touch triggers a response inside the same business day, without exception. Other work moves. The intro does not wait.

Designate one person on the team as the Orbit 04 owner, even if the replies themselves come from partners. The owner's job is to track intros, run the hand backs, and flag the partner if a response window is closing.

Keep a running list of active Orbit 04 threads inside your relationship system. Every Friday, audit the list. Anything older than 14 days without a concrete next step gets closed or escalated.

The firms that win Orbit 04 are not the firms with the most introductions. They are the firms that do the fewest things well, on time, every time.

CHAPTER AT A GLANCE

⊙ 04 Warm Adjacency. One degree removed. Not strangers, not clients. Borrowed trust with a short shelf life.

The two clocks. The relationship clock is long. The trust clock is short. The 48 hour window is where the trust lives.

Three sources. Warm introductions, content surface area, shared rooms. All three produce Orbit 04 contacts. All three expire.

Speed with craft. Preparation turns speed into respect. The structure for a warm reply is simple. Run it in under ten minutes, ship it the same day.

The hand back. Every intro creates a visibility debt to the connector. Repaying it is what keeps the flow going. Miss it and the flow quietly ends.

MONDAY MORNING TEST

Audit the last 10 warm introductions your firm received.

For each, find the time between when the intro landed and when you replied. Calculate the median.

If the median is under 24 hours, you have an Orbit 04 program. If it is between 24 and 72 hours, you have a habit that will hold under pressure. If it is over 72 hours, you are losing warm intros at six times the rate of firms that move faster.

Then audit the hand backs. For each of those 10 intros, did the connector get a closing note within two weeks? If fewer than half did, the next wave of intros is already drying up and you do not know it yet.

PART TWO: THE SYSTEM

10

⊙ 05 New Gravity

Or, The Last Place to Invest, Not the First

A forty person consulting firm I worked with shut down outbound entirely in 2023. No SDRs. No sequences. No purchased lists. The CRO quit in protest. Their pipeline grew 31% the following year.

They took the budget that had been paying an outside agency $18,000 a month for meetings that rarely closed, and they reallocated it to three places. They hired one person to run a Dead Zone reactivation program. They funded a podcast. They gave the partners air cover to spend six hours a week on Core Proof cadence.

Eighteen months later, the firm that had replaced them in the outbound agency's portfolio was still writing checks. Still getting meetings. Still not closing. Still surprised.

Orbit 05 is not broken. Orbit 05 is just misordered in most firms. It is treated as the first investment when it should be the last. It is funded when the inner orbits are starving, which is the one condition under which it cannot work.

◆ ◆ ◆

Why Orbit 05 Is Last, Not First

A cold outbound prospect who has never met you is going to do one thing before replying to your email. They are going to look you up.

They will click your LinkedIn profile. They will read your most recent posts. They will glance at your firm's website. They will scan the testimonials. They will look for third party proof. Within about ninety seconds, they will decide whether you are worth a reply.

What they find in that ninety seconds is produced by your inner orbits. Your Orbit 01 relationships are the ones writing substantive comments under your posts. Your Orbit 02 conversations are the ones generating the case studies you reference. Your Orbit 03 reactivations and Orbit 04 intros are the ones producing the proof material you deploy.

If the inner orbits are not functioning, the outbound prospect sees a ghost town. A thin profile. A stale feed. No visible proof. They decide in ninety seconds that you are not worth the reply. It is not personal. It is the absence of signal.

Running Orbit 05 before the inner orbits are funded is like lighting a fire in a room with no oxygen. You can strike every match you have. Nothing will catch.

◆ ◆ ◆

When Outbound Works

Outbound works under three conditions.

One, the inner orbits are producing visible proof. Active content in their feeds. Testimonials they can find in thirty seconds. Third party coverage that is recent and specific. This is the signal that validates the outbound when the prospect checks.

Two, the targeting is sharp. A small list of named accounts with clear ICP fit, researched enough that the outreach is personalized in ways a template cannot fake. Not a thousand sends. Fifty sends that each required an hour of thought.

Three, the cadence is patient. Professional services buyers do not convert on the first touch. They convert on the seventh, through a proof engine that makes every touch feel reasonable rather than intrusive. Outbound that treats the prospect like a one shot conversion attempt will fail. Outbound that treats them like a long relationship that has not started yet will work, slowly.

When all three are present, Orbit 05 contributes 10 to 20% of net new pipeline for a well run firm. That is a real contribution. It is not the engine. It is a supplement to the engine.

◆ ◆ ◆

When It Does Not Work

Which is most of the time.

The default failure pattern is consistent. A firm hires an outbound agency or an SDR. The agency loads a list of two thousand prospects. Templates go out. Reply rates hover between 0.8 and 1.5 percent. The meetings that do book are with mid level prospects who do not hold budget. The close rate is under 3%. After six months the firm has spent $80,000 to $120,000 and added maybe one or two small engagements to the book.

The firm then does one of two things. It blames the agency and switches to a different one. Or it blames the market and cuts outbound entirely, which looks like the right move but only because the inner orbits are so underfunded that nothing could have worked.

The real issue is neither the agency nor the market. The real issue is that Orbit 05 was asked to carry weight it cannot carry without the other four orbits supporting it.

STAT 10.01

4x

stranger cost premium

The cost per first meeting in Orbit 05 runs 4 times higher than the cost per first meeting produced from an Orbit 03 reactivation, and the close rate on those meetings is roughly half. Net, stranger acquisition costs 8 to 10 times more per closed engagement than relationship activation.

Strangers are the most expensive segment of your market. Firms that treat them as the first investment end up paying for everyone else's proof engine.

◆ ◆ ◆

The Proof Engine Precondition

If you are going to run Orbit 05, fund the proof engine first.

The proof engine is the visible output of your inner orbits. It is what an outbound prospect encounters when they check you out. It includes. Testimonials captured from real clients and deployed on a site prospects will actually visit. Case studies with specific outcomes, written in the voice of the client, not the firm. Third party content. Podcast appearances. Conference talks. LinkedIn posts that get substantive engagement from Orbit 01 and 02 contacts. Named references that will take a call if asked.

Firms with a proof engine see outbound reply rates two to four times higher than firms without one, even with identical outbound templates. The reply rate is not a function of the email. It is a function of what the prospect finds after the email lands.

If the proof engine is not running, the outbound budget is better spent on the inner orbits for the next 90 days. Then come back to Orbit 05 with a list of fifty carefully researched targets and the evidence to back the conversation.

◆ ◆ ◆

Running Orbit 05 When You Must

Some firms need some outbound. A new geography. A new service line. A deliberate push into a net new segment. The book does not argue that Orbit 05 should never be run. The book argues that it should be run last and in measured doses.

The rules for running Orbit 05 well.

Keep the target list under one hundred accounts per quarter. Below that, you can personalize. Above it, you cannot, and the work becomes a template blast.

Write the outreach yourself, at least the first wave. Do not hand the first email to an SDR with a playbook. The partner writes the first touch. The team handles the follow ups.

Measure the conversation rate, not the reply rate. A 12% reply rate that produces one real conversation is worse than a 3% reply rate that produces five.

Pause every 60 days and compare Orbit 05 pipeline to Orbit 03 pipeline. If Orbit 05 is not producing at least half of what Orbit 03 is producing per dollar spent, shut it off and reinvest.

Run Orbit 05 as a supplement, never as a sole reliance. The moment a firm's pipeline is more than 40% dependent on Orbit 05, the firm is one quarter from a problem it cannot see yet.

CHAPTER AT A GLANCE

⊙ **05 New Gravity.** Strangers. Cold outbound. Paid media. Events without existing relationships. The last orbit to invest in, not the first.

Why last. Every outbound prospect checks the inner orbits before replying. If the inner orbits are dim, the outbound cannot land.

When it works. Inner orbits producing visible proof. Sharp targeting. Patient cadence. All three, or none.

When it does not. Most of the time, because most firms run it out of order and blame the market for what a sequencing error produced.

The proof engine precondition. Outbound reply rates are two to four times higher with a live proof engine, regardless of the email itself.

The rules. Under 100 targets. Partner writes the first touch. Measure conversations, not replies. Review every 60 days. Never more than 40% of pipeline.

MONDAY MORNING TEST

If your firm is running any Orbit 05 today, pull the last 90 days of outbound activity and answer three questions.

One. How many first meetings did it produce. How many of those closed. What was the total cost, including agency fees and internal time.

Two. Over the same 90 days, how many first meetings came from Orbit 03 reactivation, Orbit 04 intros, or Core Proof referrals. What was the cost of each.

Three. Compare the two per closed engagement. If the ratio is worse than three to one in favor of the inner orbits, pause Orbit 05 for 30 days and reinvest in the proof engine. If the ratio is worse than ten to one, the pause is not a tactical move. It is survival.

PART TWO: THE SYSTEM

11

DISCOVER

Or, The Layer Every Other Layer Stands On

I sat across from a managing partner and asked one question. Describe your ideal client. She described three different clients in one answer.

Different industries. Different revenue bands. Different buying committees. Different reasons for hiring. All of them

described with equal conviction, inside the same two minutes, as though they were the same person.

Her firm was spending four million dollars a year marketing to "clients who look like our best ones." Half of that money was going to prospects who would never buy because they were not actually ICP. The other half was going to prospects who fit so broadly that every message had to be generic to speak to all of them at once.

She did not need a new campaign. She needed Discovery.

◆ ◆ ◆

What DISCOVER Actually Is

DISCOVER is the first of the five layers that turn the orbital map into an operating system. It answers one question with brutal specificity.

Who are you actually for.

Not "who would benefit from our work." Not "who could afford us." Not "who buys professional services broadly in our space." DISCOVER is sharper than any of those. It narrows the question until the answer describes a real person in a real buying seat at a real firm with a real set of problems your firm is better equipped to solve than any other option on the market.

If you cannot write that description in two sentences, you have not done Discovery. You have done marketing.

◆ ◆ ◆

The Two Sentence Test

A healthy ICP passes the two sentence test.

Sentence one describes the firm. Industry, size, revenue band, geographic footprint, operating model. Enough specificity that you could count the total number of firms that qualify.

Sentence two describes the person. Role, tenure, current problem, recent trigger, buying authority. Enough specificity that if you walked into a conference room, you would know within a minute whether the person across the table was or was not your ICP.

Weak ICP statements look like "managing partners at professional services firms who want to grow." Every word is true. Every word is useless. The description fits tens of thousands of people, which means it fits no one in a way that produces differentiated outreach.

Strong ICP statements look like "managing partners at specialty consulting firms between 30 and 120 employees, with revenue between $10M and $40M, who are five to fifteen years past founding, and who are hitting the growth plateau that forces a choice between building a Go To Market system and selling the firm." That sentence describes a specific human in a specific moment. The outreach writes itself because the person exists in your mind before the email opens.

◆ ◆ ◆

The Buying Committee Map

Most professional services buys involve three to five decision influencers, not one buyer. DISCOVER maps all of them.

The sponsor is the person who wants the change and will champion it internally. Usually the person you reach first. Often not the person who signs.

The economic buyer is the person who controls budget and can say yes with consequences. Sometimes the sponsor. Sometimes their boss. Sometimes a committee of peers.

The technical buyer is the person evaluating whether your work will actually deliver. Often a functional lead. Capable of killing a deal that is otherwise moving.

The user buyer is the person whose day to day will change if your work gets implemented. Often ignored in professional services sales. Often the most predictive signal of whether a deal will expand after it closes.

The blocker is not always a person. Sometimes it is a governance body, a procurement process, a legal review. Mapping the blocker is the difference between a 45 day close and a 180 day close.

DISCOVER names each of these roles specifically for your ICP, and identifies the default stance of each toward a firm like yours. Firms that skip this step write outreach for one buyer and stall at the decision table because three other people had questions nobody answered.

STAT 11.01

42%

discovery close rate lift

Firms that rerun Discovery every two quarters close at rates 42% higher than firms that documented their ICP once and never revisited it. The ICP is not a static asset. It is a living document.

◆ ◆ ◆

Discovery Is Continuous

The single most common DISCOVER mistake is treating it as a one time exercise.

The firm holds an offsite. Someone writes an ICP statement on a whiteboard. The statement becomes a slide. The slide becomes a document. The document sits in a shared drive for two years.

Meanwhile, the market moves. The ICP firm sizes shift. The buying committee composition changes as titles evolve. The trigger events that used to produce deals stop producing deals. The language the ICP uses to describe their problems shifts faster than the firm updates its messaging.

Firms that treat DISCOVER as continuous run a light version of it every two quarters. They interview three current clients, three lost prospects, and three Core Proof contacts who decided not to hire them. They look for what has changed since the last pass. They update the document. They update the outreach. They update the proof engine so the language matches.

This sounds heavy. It is not. Nine conversations a quarter. Twelve hours total. The return on twelve hours of DISCOVER per quarter is larger than the return on any other single activity the firm can run.

You cannot sell to someone you have not defined. You cannot serve someone you have not understood. DISCOVER is not a phase of the system. It is the foundation every other layer stands on.

◆ ◆ ◆

Why Firms Skip DISCOVER

Three reasons, all wrong.

One, the firm thinks it already knows its ICP. "We have been in this market for fifteen years. We know who our clients are." What the firm actually knows is who its clients were, five years ago, under a different set of market conditions. Knowledge is not current unless it is current.

Two, DISCOVER feels academic. No revenue is produced on the day DISCOVER is run. The partners are busy. The documents produced do not close deals this week. In the absence of a direct revenue line, the work gets deprioritized. The cost shows up 90 days later, in low close rates and generic outreach.

Three, DISCOVER is uncomfortable. Done well, it forces the firm to notice that its current positioning is off, that its messaging speaks to the wrong person, that its pricing is misaligned, that its service lines have drifted from what the market actually wants. These are hard conversations. Skipping DISCOVER is how firms avoid them. The avoidance is also what keeps the plateau intact.

CHAPTER AT A GLANCE

DISCOVER. The first layer. Answers one question with brutal specificity. Who are you actually for.

The two sentence test. One sentence on the firm. One on the person. If the description fits tens of thousands of people, it is not an ICP. It is a category.

The buying committee map. Sponsor, economic buyer, technical buyer, user buyer, blocker. Name each one for your ICP or stall at the decision table.

Discovery is continuous. Nine conversations a quarter. Twelve hours of work. The highest return activity the firm can run against the time invested.

Why firms skip it. They think they know. It feels academic. It is uncomfortable. All three are wrong.

MONDAY MORNING TEST

Write your ICP in two sentences using the template in this chapter.

Show the two sentences to three people on your team, one at a time, and ask each of them to describe the person those sentences point to.

If all three describe the same person, your DISCOVER work is current. If two describe the same person and one describes a different one, your DISCOVER work is drifting. If all three describe different people, you do not have an ICP. You have a hope.

Then schedule nine interviews across the next 60 days. Three current clients. Three lost prospects. Three Core Proof contacts who chose someone else. If you cannot find the time for nine conversations in 60 days, you will not find the revenue that DISCOVER produces either.

PART TWO: THE SYSTEM

12

PROVE

Or, The Difference Between Doing the Work and Being Seen Doing It

A partner showed me a case study that could have closed a two million dollar engagement. It sat on page fourteen of a PDF nobody had opened in sixteen months.

The work was extraordinary. The outcome was quantified. The client had given a glowing quote. The document had been written, designed, and archived. Every step in the production chain had happened. Every step except the one that mattered, which was deployment.

Nobody had used the case study in an outreach. Nobody had turned it into a LinkedIn post. Nobody had sent it to the three prospects who were sitting on the exact same problem the case study solved. The firm had proof. The firm had no proof engine.

Proof without deployment is documentation. Proof with deployment is growth.

◆ ◆ ◆

What Proof Actually Is

Professional services buyers do not trust sellers. They trust peers. The entire logic of PROVE is built on that one fact.

Proof, in the Mabbly framework, is any piece of evidence that a peer of your ICP would recognize and act on. Not marketing copy. Not testimonials you wrote for clients to approve. Not logo slides. Peer recognizable, peer verifiable, peer trustworthy evidence.

Three kinds of proof carry weight in professional services.

Case proof. Specific engagements with specific outcomes, described in language the ICP uses internally. “We reduced their vendor spend by $4.2M over 18 months” is case proof. “We optimized their procurement process” is not. The difference is whether a peer reading the description would recognize the shape of the problem and believe the outcome.

Peer proof. Testimonials, references, LinkedIn recommendations, quotes in podcasts, direct endorsements from people

the ICP knows or trusts. The weight of peer proof scales directly with how well known the peer is inside the ICP's network.

Third party proof. Podcast appearances, conference talks, published articles, industry awards, books. Anything that required an outside entity to validate your expertise. Third party proof is the slowest to produce and the most durable once it exists.

Most firms have all three. Most firms deploy none of them systematically.

◆ ◆ ◆

Where Proof Lives

Proof that lives in a PDF on a shared drive is dead proof. Proof that lives in front of the ICP is live proof.

Live proof lives in five places.

On LinkedIn, in the form of substantive posts that reference specific work, tag specific clients with permission, and produce conversation in the comments. An ICP checking you out before replying to an email will land here first.

In outreach emails, in the form of one or two sentences of specific evidence folded into the body. "We worked with a firm in your space on exactly this problem last year. They saw a 38% improvement in six months. Happy to share the short write up." This is the proof that converts outreach into conversation.

On your website, in the form of specific, outcome driven case studies visible within two clicks of the homepage. Not a login gated library. Not a content catalog. Three to five sharp, quantified stories on the page a prospect will actually visit.

In podcast appearances, where the proof is absorbed over twenty to forty minutes rather than read in thirty seconds. Podcast proof converts higher than written proof because the listener has chosen to give you their attention.

In live conversations with Core Proof, where references and quotes are shared directly between peers. This is the highest trust form of proof and the one that never appears in any dashboard.

STAT 12.01

58%

proof lift on close rate

Firms that operate a continuous proof capture and deployment system close at a 58% higher rate than firms with identical case studies buried in static PDFs. The work is the same. The visibility is the variable.

◆ ◆ ◆

The Proof Engine

A proof engine is the system that turns completed work into deployed evidence on a repeatable cadence. Three steps. All three required.

Capture. At the end of every engagement, or at a specific milestone within it, someone on the team captures the outcome in three forms. A quantified short description under 100 words. A one paragraph version under 300 words. A one page version under 900 words. All three are written in the voice of the client or the peer, not the firm. The client reviews and approves each version.

Package. The three versions get packaged into deployment ready formats. A LinkedIn post draft. A paragraph for outreach emails. A webpage update. A quote block for proposals. Each format is produced once and reused indefinitely.

Deploy. The packaged proof enters circulation. The LinkedIn post gets scheduled. The outreach paragraph gets added to the firm's outreach playbook. The webpage gets updated. The quote gets shared with the sales team. Every partner has access to every piece of deployed proof and uses it.

Firms that run this engine produce 6 to 10 new proof units per quarter. Firms that do not produce zero, because capture requires intent.

Proof that nobody sees is not proof. It is documentation. The difference is what separates firms that grow from firms that explain why they did not.

◆ ◆ ◆

The Proof Gap

Most professional services firms have far more proof than they realize and far less than they deploy.

The average firm we audit has produced between 40 and 120 legitimate case worthy engagements in the last three years. Of those, between three and eight are published as case studies. Of those, fewer than three are being actively used in outreach. The deployment rate is under 5%.

The proof gap is the distance between the proof that exists and the proof that is visible. Closing the gap does not require new work. It requires systematic harvest of work that has already happened.

The cost of closing the gap is one person, roughly ten hours a week, running the capture and package steps. The return is a proof engine that compounds every quarter. In year one, the firm doubles its deployed proof. In year two, the library becomes substantial enough that every outreach message, proposal, and website visitor encounters specific, relevant evidence within seconds. The compounding curve starts flat and bends steeply after about 18 months.

◆ ◆ ◆

Why Firms Have Proof but Cannot Use It

Three structural reasons.

The partner who did the work does not write up the outcome because writing is slow, revenue producing work is next, and the outcome feels obvious from the inside. It is not obvious to the prospect, who has never seen any of it.

The marketing team does not capture the outcome because marketing does not have access to the engagement details, the client relationships, or the authority to request client quotes. In most firms there is no defined handoff from delivery to proof production.

The firm has no designated owner of proof. Everyone agrees it is important. No one's weekly priorities include it. Without a designated owner, proof production happens in bursts during slow quarters and stops entirely when the firm is busy, which is exactly when new proof is being generated in volume.

Fixing the proof gap almost always requires one decision. Assign one person. Give them authority to request capture from delivery teams. Make proof production part of engagement close out, not an optional afterthought. This one move closes 60% of the gap on its own.

CHAPTER AT A GLANCE

PROVE. The second layer. Turns completed work into deployed evidence on a repeatable cadence.

Three kinds of proof. Case, peer, third party. All three carry weight. All three require capture, packaging, and deployment.

Where proof lives. LinkedIn, outreach, website, podcasts, live conversations. Proof in a shared drive is dead proof.

The proof engine. Capture at engagement close. Package into five deployment formats. Deploy on a cadence. Every partner uses the library.

The proof gap. Most firms deploy under 5% of the proof they have already produced. Closing the gap does not require new work. It requires systematic harvest.

The one decision. Assign one owner. The 60% move.

MONDAY MORNING TEST

List the last ten engagements your firm completed.

For each, answer three questions. Do you have a quantified outcome statement under 100 words that a peer would recognize. Is it deployed anywhere visible to a prospect. When was the last time it was used in outreach.

If you have fewer than three engagements that pass all three tests, your proof engine is not running. You have proof in raw form and no system for turning it into visibility.

Assign one person, today, to own proof production. Give them 10 hours a week and authority to request capture from any engagement team. Review their output in 60 days. If the deployed proof library has not doubled, the owner needs more authority, not more time.

PART TWO: THE SYSTEM

13

DESIGN

Or, Why Every Firm Has the Tools and No Firm Has the Motion

A firm I audited had Salesforce, HubSpot, Outreach, Gong, LinkedIn Sales Navigator, and three consultants on retainer. Forty five tools in total.

They could not tell me who was supposed to touch a dormant contact on a Tuesday. They could not tell me what happened

to a warm intro received on Friday afternoon. They could not tell me which partner owned Core Proof cadence, or whether the Monday review meeting existed to produce decisions or to watch dashboards.

The tools were not the problem. The tools were doing what they were built to do. The problem was that the firm had never designed the motion the tools were supposed to support. Technology without design produces activity. Design with or without technology produces revenue.

◆ ◆ ◆

What DESIGN Means

DESIGN is the third layer of the system. It answers the question that separates a working firm from a confused one.

Who does what, when, to whom, under what trigger.

That is the whole question. Four variables, each one simple in isolation, catastrophic when any is ambiguous. Most firms handle two of them and let the other two drift. The drift is where the motion breaks.

Who. Every orbit has a primary owner, not a committee. Core Proof is typically owned by a managing partner. Orbit 02 cadence is owned by the partners who hold the relationships. Orbit 03 reactivation is often owned by a designated relationship operator. Orbit 04 responses are owned by the partner receiving the intro, with alerts run by a coordinator. Orbit 05 is owned by whoever runs outbound, if anyone. If two people think they own an orbit, no one does.

What. The specific action that qualifies as a touch inside each orbit. A specific email template or template family for reactivation. A specific cadence of LinkedIn engagement for Core Proof. A specific response window for Orbit 04. Without

a defined "what," every touch is invented from scratch and the quality varies wildly.

When. The cadence and the trigger. Core Proof gets a touch on a fixed monthly cadence. Orbit 02 gets triggered alerts at 30, 60, and 80 days. Orbit 03 gets a scheduled program four times a year. Orbit 04 gets same day response, no exceptions. Orbit 05 gets whatever is left.

To Whom. The specific contact list inside each orbit, maintained with discipline. If the list is wrong, every other layer produces misfires.

A design is the document, diagram, or ritual that locks all four variables in place across all five orbits. Most firms have it for Orbit 02 and Orbit 05, drift on Orbit 03, and never formalize it for Orbit 01 or Orbit 04.

◆ ◆ ◆

The Responsibility Map

A usable DESIGN fits on one page. Five rows. Five columns. Every cell filled.

Rows are the five orbits. Columns are owner, cadence, trigger, tool, review.

The map sits in the firm's relationship operating document and on the wall of the room where weekly growth reviews happen. Every Friday, the team looks at the map and asks one question. Is each row executing as designed. Where a row is stalled, the question is not "why is this not working." It is "which cell in the row is ambiguous." Almost always, the stall traces to a cell that looks filled but is not actually operating.

A common example. The Orbit 03 row names a reactivation owner. The cadence says "quarterly program." The

trigger says "quarterly review." The review column is blank. Blank review means nobody is asking whether the program ran, whether it produced responses, whether the responses became conversations. The row looks designed. It is not. It is decorated.

STAT 13.01

3.2x

design multiplier

Firms with a documented one page orbital design execute 3.2 times more relationship outreach per quarter than firms that rely on individual partner initiative. The design does not add capacity. It prevents the capacity already present from being lost to ambiguity.

◆ ◆ ◆

The Signal to Action Chain

Design is also about what happens between a signal and a response.

A client hires a new CFO. That is a signal. What happens next.

In an undesigned firm, the information lands somewhere. Maybe in someone's LinkedIn feed. Maybe in a partner's inbox. Maybe in a sales intelligence tool nobody checks. The signal travels a random path, and if a response happens at all, it happens because the right person noticed and had time.

In a designed firm, the signal enters a pipeline. The tool flags it. The assigned owner reviews the flag inside a defined window. The owner decides whether the signal warrants a touch. If yes, the owner selects from a predefined set of response structures. The touch goes out. The response is logged. The outcome feeds back into the system.

The gap between these two models is what the signal to action chain measures. The best firms we have studied have response latency under 48 hours for important signals. The worst firms we have studied have response latency measured in weeks, when they respond at all.

Every hour of latency between signal and action reduces the probability of conversion. The design does not just improve outcomes. It removes the conditions under which outcomes are lost.

Tools without design produce activity. Design with or without tools produces revenue.

◆ ◆ ◆

The Minimum Viable Design

A full design takes time to build. A minimum viable design takes an afternoon.

The minimum viable design is one page. Hand drawn is fine. The columns are the five orbits. For each orbit, write one line for each of the four variables.

Who owns it. What qualifies as a touch. When it happens. To whom.

That is it. No dashboards. No software. No integrations. A one page hand drawn map that every partner in the firm has seen, understood, and agreed to.

Firms that implement the minimum viable design this week outperform firms that spend six months designing the perfect system. The reason is obvious on reflection. A flawed design that is in operation produces learning every week. A perfect design that is still being built produces nothing until it is launched, and it is never launched because the standard keeps moving.

Ship the bad version. Watch it run for 30 days. Fix the two things that are obviously broken. Watch it run another 30. Repeat. Inside six months, a minimum viable design evolves into something better than any design a consultant could have produced in advance.

◆ ◆ ◆

Why Firms Have Tools but No Design

Three reasons converge.

Tools are easy to buy. Every SaaS vendor in the professional services ecosystem will sell a firm a tool tomorrow

afternoon. The tool arrives with a sense of progress, a login screen, and the feeling that something has been done. The design the tool was supposed to support never gets built, because the tool implies it already exists.

Design is operations work, not strategy work. In most firms, the strategic discussions get the partner hours. The operational work of writing down who does what and when gets pushed to an admin or a consultant who is not in the meetings where the real decisions happen. The resulting document is always wrong.

Design requires conflict. Naming the owner of each orbit forces the firm to admit that some things are not being owned. Naming the cadence forces the firm to admit that some cadences have not been followed. Naming the trigger forces the firm to admit that some signals have been missed. The honesty is uncomfortable. Avoidance is easier. Avoidance is also what keeps the plateau.

CHAPTER AT A GLANCE

DESIGN. The third layer. Answers the whole question. Who does what, when, to whom, under what trigger.

The responsibility map. Five orbits, five rows, five columns. Owner, cadence, trigger, tool, review. Every cell filled, every Friday reviewed.

The signal to action chain. The best firms respond to important signals in under 48 hours. The worst respond in weeks, if at all. Design is what closes the gap.

The minimum viable design. One page. Hand drawn. Shipped this week. Iterated every 30 days. Better than any perfect design that never ships.

Why firms skip it. Tools feel like progress. Design is operations work. Design forces hard conversations. All three are true. None are reasons.

MONDAY MORNING TEST

Pull out a sheet of paper. Draw five rows, one for each orbit.

For each orbit, write a single sentence that answers. Who owns this orbit by name. What specific action qualifies as a touch. When does the touch happen. Which contacts are in the orbit today.

If you can answer all four questions for every orbit in under twenty minutes, you have a design in your head. Make it visible by writing it down and sharing it with every partner.

If you stall on any row, you have identified the break point in your current motion. Fix that row this month. The system will not perform until every row has all four answers.

PART TWO: THE SYSTEM

14

ACTIVATE

Or, The Step That Separates a Plan From a Rumor

A firm I worked with had a flawless plan, a trained team, a proof engine in early operation, and a design so clean it could have been framed. They ran the program for six weeks.

They sent fourteen emails total.

Not per week. Not per day. Fourteen emails in six weeks. Across ten partners. Against a documented plan that called for more than two hundred touches in that window.

The partner running growth for the firm looked at the number and said the line every firm eventually says. “We had the strategy. We just did not execute.”

That sentence is the diagnosis. The gap between plan and send is where most professional services growth programs die. Not because the plan was wrong. Because nobody protected the time to do the thing.

◆ ◆ ◆

The Gap Between Planning and Sending

Plans produce the feeling of progress. Sends produce revenue.

This is a difficult truth for firms to accept because planning is visible, social, and reassuring. Plans get meetings. Plans get documents. Plans get nods of approval. Sends require sitting alone with a blank screen and writing something specific to a specific person at a specific moment. Plans are group activities. Sends are individual discipline.

Across 140 firms we have audited, the average execution rate against documented outreach plans is 17%. The top decile hits 73%. The difference is not strategy, talent, market, or tooling. The difference is whether the firm has installed a weekly rhythm that protects send time from everything else on the calendar.

When a partner’s Friday morning is filled with internal meetings, the outreach does not get sent. When a partner’s inbox is triaged before outreach is drafted, the outreach does not get sent. When client work creeps into the time block

reserved for relationship touches, the outreach does not get sent. Every one of these choices feels defensible in the moment. The cumulative cost is invisible until the pipeline reports arrive and the plan has produced 17% of what it promised.

◆ ◆ ◆

The Weekly Rhythm

Firms that hit high execution rates share one thing. A protected weekly rhythm that the calendar treats as non negotiable.

The rhythm looks the same at almost every firm we have seen execute well.

Monday morning, 30 minutes. Pipeline review. Every partner knows their targets for the week. Any blockers are surfaced.

Wednesday afternoon, 60 minutes. Protected block. Partners draft the week's outreach. The block is on the calendar, declined against internal meeting requests, and recognized by the team as untouchable.

Friday morning, 30 minutes. Send review. Every partner confirms their sends have gone. Anything unsent by Friday noon gets either sent before the close of day or explicitly moved to next week with reason.

Friday afternoon, 30 minutes. Orbit 02 alert review. The 60 and 80 day contacts get touches before the week ends.

Total protected time per partner per week. Roughly two and a half hours. In exchange, a firm running this rhythm will execute 10 to 15 relationship touches per partner per week, which at a ten partner firm is 100 to 150 touches weekly,

which is what produces the pipeline that planning alone cannot deliver.

◆ ◆ ◆

Protecting Activation Time

Activation time has to be protected deliberately, because nothing in a professional services firm's default calendar will protect it automatically.

Four rules hold the line.

One. Activation blocks appear on the calendar first, before any other internal meeting is scheduled. Not the meetings that get cancelled to make room for client work. The other way around.

Two. The activation block cannot be double booked. If a client emergency requires the partner to move the block, it moves to another slot inside the same week. Not the next week. The cadence breaks the moment a block slides out of its week.

Three. Activation blocks are social. The whole team knows the blocks exist, the whole team respects them, and the whole team produces a visible signal at the end of each block. A send count. A list of touches made. A short Slack update. The social accountability is what makes the block hold under pressure.

Four. Missed blocks are reviewed, not hidden. When a partner misses an activation block, the Monday review names it. Not with blame. With clarity. Missed blocks are data. Patterns of missed blocks predict pipeline problems 60 days out and are the earliest signal the firm has that something in the design is breaking.

STAT 14.01

17%

average activation rate

Across 140 firms we audited, the average actual execution rate against documented outreach plans was 17%. The top decile hit 73%. The difference was never strategy. It was always the presence or absence of a protected weekly rhythm.

A strategy you do not send is not a strategy. It is a document.

◆ ◆ ◆

What Activated Looks Like

An activated firm does not look impressive from the outside. There is no war room, no dashboard in the lobby, no quarterly campaign launch.

What the activated firm has instead is quiet, consistent output. Partners sending five to ten touches per week. Responses coming in at rates that look unremarkable week to week but compound over months. A Monday meeting that is boring because nothing is on fire. A Friday meeting that is short because everything shipped.

The most reliable external signal that a firm has activated is that the pipeline report looks boring. Not spiky. Not empty. Not panicked. A steady flow of named relationships moving from orbit to orbit in predictable volumes. The variance tightens as the system runs. The worst months stop being crises. The best months stop being anomalies. This is what activation looks like when it holds for a year.

◆ ◆ ◆

Why Firms Stall at This Step

Three reasons, all familiar.

The first. Planning is a group sport and sending is individual discipline. The firm is good at the first and bad at the second because the first involves partners talking to partners, which is what partners prefer. The second involves partners writing to clients and prospects, which is harder, more exposed, and less immediately rewarding.

The second. No one owns execution as a line of accountability. Strategy is owned by a partner or a growth leader. Design is owned by operations. Execution is assumed to happen automatically once the first two are in place. It does not. Execution requires its own owner, its own rhythm, and its own review.

The third. The firm confuses activity with execution. A lot of internal meetings about growth are not execution. A lot of pipeline reports about opportunities already in motion are not execution. Execution is specifically the act of sending outbound touches, replying to intros, following up on conversations, and reactivating dormant contacts. Everything else is support work. Support work feels productive. Execution is productive.

CHAPTER AT A GLANCE

ACTIVATE. The fourth layer. The step that turns a plan into sends. Where most programs die.

The execution gap. Average firms execute 17% of documented plans. Top decile executes 73%. The variable is rhythm, not talent.

The weekly rhythm. Monday pipeline review. Wednesday send block. Friday send review. Friday Orbit 02 audit. Two and a half hours per partner per week.

Protecting activation time. Four rules. Block first. No double booking. Social accountability. Missed blocks reviewed, not hidden.

What activated looks like. Boring. Steady. No spikes. A pipeline that stops being emotionally volatile and starts being predictable.

Why firms stall. Planning is social, sending is individual. Execution has no default owner. Activity gets confused with execution.

MONDAY MORNING TEST

Count the relationship touches your firm sent last week, in total, across every partner.

Divide by the number of partners. That is your average weekly send rate per partner.

If the number is above 8, you have an activation rhythm. If it is between 3 and 8, you have intent but not rhythm. If it is under 3, you do not have an activation program at all. You have a plan.

Then put the four weekly blocks on every partner calendar this week. Not next week. This week. Protect them. Review them Friday. If you can hold the rhythm for four straight weeks, the compound layer becomes possible. If you cannot, nothing in the system downstream will work.

PART TWO: THE SYSTEM

15

COMPOUND

Or, What Happens When You Do Not Stop

Eighteen months into the system, a managing partner I had worked with sent me a one line email. "We stopped doing outbound six months ago and we are at capacity."

Her firm was fifty people. Her pipeline for the next two quarters was full. Her cost of acquisition had dropped 67% against the baseline she had brought into our first conversation. Her partners were doing less outreach per week than they had been doing a year earlier, and producing more pipeline per hour than they had ever produced.

She had not found a new market. She had not discovered a new channel. She had not hired a new growth leader. She had done one thing consistently for eighteen months. She had run the system the way the system was designed to be run, and she had refused to stop when it was not immediately producing visible returns.

The compound had arrived. It did not look like a flywheel. It looked like quiet.

◆ ◆ ◆

What Compounding Looks Like

Compounding in professional services does not look like a curve bending upward on a dashboard. It looks like the absence of things.

The absence of a quarterly growth panic. The absence of a pipeline review that produces anxiety. The absence of partners spending their mornings strategizing about new campaigns because the current ones are working. The absence of outbound agency invoices. The absence of the managing partner asking "where is new business coming from" because everyone knows the answer.

Inside the firm, the absence feels like calm. Inside the pipeline, the absence feels like predictability. Inside the partnership, the absence feels like trust that the next quarter will be like this quarter, because the quarter after that will be too.

This is what a compounding system produces. It is the hardest thing to describe to a firm that does not have it yet, because firms that do not have it cannot imagine their calendar without the panic.

◆ ◆ ◆

The Invisible Returns

The first year of running the full system produces visible returns. Pipeline improves. Cost per meeting drops. Close rates rise. These are the returns most firms expect and report against.

The second year produces invisible returns. Things the firm did not measure because it did not know to look.

Core Proof contacts refer new business at accelerating rates because the cadence has convinced them the firm is serious. Orbit 03 reactivations come back a second time, years after the first reactivation, because the signal led outreach has become part of the firm's reputation. Warm introductions arrive unprompted from people the firm has not asked, because the proof engine has made the firm easy to recommend. Outbound prospects, when encountered, know who the firm is before the first meeting because the content has reached them through three separate adjacent channels.

None of these returns appear in a campaign report. All of them contribute to the drop in CAC and the rise in win rate. The system is producing revenue through mechanisms the dashboard cannot track, because the dashboard was built for a funnel and the firm is running on orbits.

STAT 15.01

63%

CAC reduction at 18 months

Firms that run the full orbital system consistently for 18 months see their cost of acquisition drop by 63% against baseline, while pipeline value per partner hour rises by 4 to 7 times. The curve is flat for the first 6 months and bends steeply after the twelfth.

◆ ◆ ◆

Why Compound Takes 12 to 18 Months

The time curve is not a motivational claim. It is the biology of professional services buying.

Professional services buyers do not decide to hire a new firm in 30 days. The typical decision cycle runs between three and nine months from first meaningful contact to signed engagement. A firm that installs the system today will generate first meetings in month two, conversations in months three and four, proposals in months four through six, and signed engagements in months five through nine. The first wave of closed revenue from new activity lands somewhere in months six to twelve.

The second wave is where compounding shows up. The engagements that closed in months six to twelve become the proof material deployed in months twelve to eighteen. The Core Proof relationships the firm has been tending for twelve months start producing referrals in months twelve to eighteen. The Orbit 03 reactivations that did not convert the first time convert on a second touch when the firm stays present. The warm adjacencies that declined an intro in month six accept one in month fifteen.

Months twelve to eighteen are when the firm stops doing linear work and starts seeing exponential output. The exponential does not announce itself. It shows up as a month where the pipeline is suddenly fuller than it has been in years, and the firm cannot point to a specific cause. The cause is everything. The system has reached the point where every orbit is feeding every other orbit.

◆ ◆ ◆

The Danger of Stopping

The most dangerous moment in the system is month seven.

At month seven, the firm has been running the rhythm for 30 weeks. The first wave of returns has begun to arrive, but it is modest. The partners are tired of the weekly cadence. The initial enthusiasm for the system has faded. Something urgent is consuming attention. The firm does not decide to stop. It just stops protecting the activation blocks. The Wednesday sends drop from eight to three. The Friday reviews get skipped.

Three months later, the firm wonders why the pipeline has softened. The assumption is that the system did not work. The reality is that the system worked, was unplugged in

month seven, and the consequences took until month ten to show up in reports.

This is why the compound takes discipline, not belief. The belief in the system is easy in month one when everything is new, and in month eighteen when the returns are undeniable. The belief is hard in month seven, which is the moment that determines whether the firm ever reaches month eighteen.

The single highest leverage decision a managing partner makes is the decision to not stop in month seven.

The compound does not announce itself. It shows up as a calendar that fills itself, a pipeline that forgets to empty, and a firm that stops thinking about growth.

◆ ◆ ◆

What the Other Side Looks Like

A firm on the other side of the 18 month curve has changed in ways that show up in the numbers and in the culture.

In the numbers. CAC is 60 to 70% lower than baseline. Pipeline is 2 to 3 times larger than baseline on fewer total outreach touches. Close rates are 20 to 40 points higher. Partner hours spent on growth are 30 to 50% lower. Revenue per partner has typically risen 40 to 80%.

In the culture. The firm stops talking about "the growth problem" because the growth problem no longer exists as a conscious category. The Monday morning pipeline review becomes a brief confirmation meeting. New partner hires are evaluated in part on whether they can hold the rhythm, because the rhythm is now understood as the core discipline of the firm. New service lines are launched with a small, deliberate Orbit 03 reactivation, which produces first engagements before the new line even has a webpage.

The firm has stopped being subject to market cycles. It still feels them, but they move it by margins instead of shocks. This is the final compound. A firm that has built enough relational depth in its universe to be less dependent on the weather than its peers.

CHAPTER AT A GLANCE

COMPOUND. The fifth layer. What happens when you do not stop.

What compounding looks like. Not a curve bending upward. The absence of growth panic. Quiet. Predictability. Pipeline that forgets to empty.

The invisible returns. Second year produces things no dashboard tracks. Unprompted intros. Self replenishing pipeline. Recognition in first meetings.

Why it takes 12 to 18 months. The biology of professional services buying. First waves close in months 6 to 12. Compound arrives months 12 to 18.

The danger of stopping. Month 7 is the most dangerous moment. The single highest leverage decision is the decision not to stop.

The other side. 60 to 70% lower CAC. 2 to 3 times larger pipeline. 20 to 40 point higher close rates. A firm no longer subject to the weather.

MONDAY MORNING TEST

Measure three baseline numbers today. One, cost per new first meeting. Two, percent of pipeline that comes from named relationships versus strangers. Three, partner hours spent per new engagement signed.

Write them down. Store them somewhere you will find in 180 days.

Then install the full system. Run the weekly rhythm. Protect the blocks. Do not stop at month seven.

On day 180, pull the same three numbers. If they have not moved, something in the system is not installed and the next 180 days should be spent diagnosing which layer is broken. If they have moved, you are compounding. Keep going. Month 18 is better than month 9. Month 36 is better than month 18. There is no version of this where stopping makes sense.

PART THREE: THE COMMITMENT

16

The Three Laws in Practice

Or, The Closing Argument Between You and Your Firm

Two years after we had first sat down, a managing partner called me. He wanted me to know two things.

One, he was about to close the most important deal of his twenty year career that week. A nine figure engagement,

with a firm that matched his ICP so precisely it read like a case study from one of our own Discovery Sessions.

Two, the conversation that had opened the door had come from a relationship he had written off seven years earlier. A former client, long out of the old role, who had remembered him when a peer at the new firm asked "who have you seen do this well." The peer made the intro on a Thursday. He replied the same afternoon. He closed the deal ten weeks later.

The call ended the way these calls always end. He said the line every practitioner eventually says. "The relationships were there the whole time."

That is the whole book. Every orbit, every layer, every stat, every Monday Morning Test adds up to one realization. The firms that win in professional services are not the firms with the cleverest strategy or the flashiest content. They are the firms that show up, consistently, to relationships they already have, until the compounding takes over.

◆ ◆ ◆

Proof Before Pitch

The first law of the Preface was the one I have seen firms violate most often.

Proof before pitch means you do not ask for the meeting before you have given them the reason. You do not ask for the engagement before you have shown them the evidence. You do not ask for the commitment before they have seen a peer they trust vouch for your work.

This is not a technique. It is a posture. Firms that pitch before they prove feel transactional. Firms that prove before they pitch feel inevitable. The ICP responds differently to

each, every time, in ways the firm often cannot see because the response to a pitch is silence and silence is invisible.

The operational version of this law lives in PROVE and ACTIVATE. Build the proof engine. Deploy the evidence. Make sure the ICP encounters proof in the first sixty seconds of any interaction with your firm. Then, and only then, make the ask.

◆ ◆ ◆

Relationships Before Revenue

The second law produces the strangest paradox in the book.

The firms that chase revenue directly get less of it. The firms that invest in relationship depth find that revenue arrives, often abundantly, often ahead of schedule, often from sources they could not have predicted.

The paradox is only strange if you think of revenue and relationships as separate objectives. They are not. Revenue in professional services is a byproduct of relational depth. A firm with shallow relationships and aggressive sales will produce spikes of revenue and valleys of silence. A firm with deep relationships and patient cadence will produce a steady revenue surface that does not look impressive month to month and looks remarkable across years.

The operational version of this law lives in Orbits 01 through 04. Protect the inner rings. Touch them deliberately. Assume every touch is an investment, not a transaction, and you will find the investments produce returns the transactions never could.

◆ ◆ ◆

Signal Before Message

The third law is the most tactical of the three and the most often skipped.

Reaching out without a reason is selling. Reaching out because something relevant happened in their world, and you have something useful to offer about it, is service. The difference is microscopic in the writing and enormous in the receiving.

The operational version of this law lives across every orbit but most critically in Orbit 03. Find the signal. Acknowledge the signal. Build the message around the signal. Then send. A reactivation email without a signal produces the ghosting you have come to expect. A reactivation email with a strong signal produces the conversion rate that turns the Dead Zone into the firm's fastest growing pipeline source.

The firm you want to be is already living inside the relationships you already have. The only question is whether you are going to show up.

◆ ◆ ◆

What This Actually Takes

Honest answer. Less than you think, and more than you hope.

Less than you think, because the system does not require new markets, new service lines, new technology platforms,

or new hires. It requires using what you already have with more discipline than you have been using it.

More than you hope, because the discipline itself is the work. Nothing in this book is intellectually hard. All of it is operationally hard. The Monday Morning Tests are not clever prompts. They are the actual things your firm is not doing, laid bare. Doing them will produce the results. Skipping them will produce the same plateau you have been producing.

The firms that install this system successfully share one trait. They do not look for exceptions. When the book says touch Core Proof monthly, they touch Core Proof monthly. When the book says respond to warm intros within 48 hours, they respond to warm intros within 48 hours. When the book says run the Friday review, they run the Friday review. The system does not reward creativity in the wrong places. The creativity belongs in the content of the touches. The structure is meant to be boring.

◆ ◆ ◆

The Closing Ask

You have finished the book. You have seen the orbits. You have read the layers. You have scored yourself, internally, on whether your firm would survive an honest audit against any of them.

The closing ask is simple.

Start with one orbit. Not five. One.

Pick the orbit where you know the pain is sharpest. For most firms reading this book, that orbit will be Orbit 01 Core Proof or Orbit 03 Dead Zone. For some, it will be Orbit 04 Warm Adjacency. The specific choice matters less than the decision to begin.

Run the Monday Morning Test for that orbit this week. Implement the cadence next week. Run it for 90 days without changing it, without getting creative, without looking for shortcuts.

At day 90, measure what happened. You will see, in 90 days, more than enough evidence to decide whether to install the rest of the system or not. The firm that runs one orbit well for 90 days has already changed more than the firm that planned to run all five and never started.

Start small. Protect the time. Do not stop. That is the whole practice.

CHAPTER AT A GLANCE

The three laws, revisited. Proof before pitch. Relationships before revenue. Signal before message. Every layer of the system implements one or more of these.

What it takes. Less intellect than you fear. More discipline than you hope. The work is not the thinking. It is the not stopping.

The single trait of firms that succeed. They do not look for exceptions. When the system says touch monthly, they touch monthly. The creativity is in the content. The structure is boring on purpose.

Start with one. One orbit, 90 days, one cadence, no shortcuts. Then decide about the rest.

The line every practitioner eventually says. The relationships were there the whole time. The only question is whether you show up.

MONDAY MORNING TEST

Close this book.

Open a blank calendar invite for one hour next Wednesday.

Title it: Core Proof. Make it recurring weekly. Invite no one but yourself.

When the hour arrives, write three touches to three people on your Core Proof list. No ask. Just substance. Send them before the hour ends.

Repeat for 12 weeks.

Then call us, or do not. At that point, the system will either have produced results you can no longer ignore, or you will have ignored the system. Those are the only two outcomes. We hope it is the first one. If it is, we would love to hear the story. If it is not, the book will still be here when you are ready.

Richard Ashbaugh & Adam Fridman
CHICAGO, 2026

APPENDIX

Sources and Notes

A NOTE ON THE DATA

Every claim in this book is traceable. Every voice is credited. Every data point is sourced. The bibliography below is organized in nine sections. The first four cover published work that shaped our thinking. The next three cover the proprietary research, interviews, and operational data that produced the frameworks. The last two cover the frameworks we borrowed explicitly and the statistical claims whose sources we verified in detail.

Where a statistic is drawn from Mabbly operational data, we say so. Where it is drawn from external research, we name the source. Where we have reframed a commonly cited statistic because the original attribution was wrong or the phrasing had drifted, we explain the correction in Section 9.

SECTION 1. BOOKS

Fridman, Adam, and Hank Ostholthoff. *The Science of Story: Brand is a Reflection of Culture.* 2018. The founding research for this book. 500 plus interviews on how culture becomes brand. Establishes the research methodology and the origin of the relationship activation insight.

Maister, David H. *Managing the Professional Service Firm.* Free Press, 1993. The definitive text on PS firm operations. Foundational to the argument that the most important concern is to build the relationship with a client, not the immediate job.

Maister, David H., Charles H. Green, and Robert M. Galford. *The Trusted Advisor.* Free Press, 2000. The trust equation (credibility plus reliability plus intimacy, divided by self orientation). Foundational to the relationships before revenue principle.

Ferrazzi, Keith. *Never Eat Alone: And Other Secrets to Success, One Relationship at a Time.* Currency, 2005 (expanded 2014). Influence on chapter 1. "Your network is your destiny." "Relationships are more like muscles. The more you work them, the stronger they become."

Rackham, Neil. *SPIN Selling.* McGraw Hill, 1988. Cited in the Formula chapter. 35,000 sales calls studied across 20 countries over 12 years. Validates that explicit buying signals predict success in large professional services deals.

Dixon, Matthew, and Brent Adamson. *The Challenger Sale: Taking Control of the Customer Conversation.* Portfolio, 2011. Cited in the Formula chapter. 6,000 reps across 90 companies. Validates the proof plus signal approach over pure relationship selling.

Fleming, Julie. *The Reluctant Rainmaker: A Guide for Lawyers Who Hate Selling.* Aspatore Books, 2010. Cited in the Wrong Map chapter. Research on BD resistance in professional services as fear based, not capability based. Partners score high on autonomy and skepticism, low on resilience. Selling feels like betrayal of professional identity.

Harding, Ford. *Rain Making: Attract New Clients No Matter What Your Field.* Adams Media, 2nd ed., 2008. Key insight: the final decision on hiring a professional comes down to emotion. The client hires the one he likes and justifies with logic after the fact.

Wickman, Gino. *Traction: Get a Grip on Your Business.* BenBella Books, 2012. Acknowledged inspiration for the GTM Rocks and GTM Weekly Rhythm, adapted here for professional services go to market.

Collins, Jim. *Good to Great: Why Some Companies Make the Leap and Others Don't.* HarperBusiness, 2001. Hedgehog Concept as parallel to the Core. Flywheel concept parallels the compound loops in the COMPOUND chapter.

Elias, Craig, and Tibor Kovac. *SHiFT! Harness the Trigger Events That Turn Prospects into Customers.* McGraw Hill, 2010. Cited in the Formula chapter. Reaching a prospect within two weeks of a trigger event increases win probability by 74 percent. First seller to contact after a trigger is 5 times more likely to win.

Sheridan, Marcus. *They Ask, You Answer: A Revolutionary Approach to Inbound Sales, Content Marketing, and Today's Digital Consumer.* Wiley, revised 2019. Influence on the proof layer. Content as trust building mechanism.

Moore, Geoffrey A. *Crossing the Chasm: Marketing and Selling Disruptive Products to Mainstream Customers.* HarperBusiness, 3rd ed., 2014. Beachhead strategy origin. Cited conceptually in the DESIGN chapter.

Kim, W. Chan, and Renée Mauborgne. *Blue Ocean Strategy: How to Create Uncontested Market Space and Make the Competition Irrelevant.* Harvard Business Review Press, expanded ed., 2015. Influence on category creation thinking in the DESIGN chapter. Strategy Canvas as parallel to the MAP.

Doerr, John. *Measure What Matters: How Google, Bono, and the Gates Foundation Rock the World with OKRs.* Portfolio, 2018. Influence on GTM Rocks and measurable quarterly priorities.

Clear, James. *Atomic Habits: An Easy and Proven Way to Build Good Habits and Break Bad Ones.* Avery, 2018. Influence on the compound loop thinking of the COMPOUND chapter. Small actions compounding over time.

Dunbar, Robin. *Friends: Understanding the Power of Our Most Important Relationships.* Little, Brown and Company, 2021. Cited in chapter 1. Dunbar's Number: 150 stable relationships. Social brain hypothesis. Tiers of 5, 15, 50, and 150.

SECTION 2. ACADEMIC RESEARCH AND JOURNAL ARTICLES

Dixon, Matthew. "The Activator Advantage." *Harvard Business Review,* November/December 2023. The Rainmaker Genome Project. 3,000 partners across 41 professional services firms. Identified Activators (27 percent of top rainmakers) as the highest performing cohort. Concluded that deep relationships alone no longer produce future business. Cited in the Five Truths chapter.

Dunbar, R.I.M. "Neocortex size as a constraint on group size in primates." *Journal of Human Evolution* 22, no. 6 (1992): 469 to 493. Original research establishing the 150 person limit on stable social relationships. Cited in chapter 1.

Rackham, Neil. SPIN Selling field research. Huthwaite Inc., 1974 to 1988. 35,000 sales calls. 20 countries. 12 years. Established that situation, problem, implication, and need payoff questions predict large deal success. Cited in the Formula chapter.

Elias, Craig. Trigger event selling research. Various publications, 2005 to 2010. 74 percent win probability when reaching prospects within two weeks of a trigger. First seller after a trigger 5 times more likely to win.

SECTION 3. INDUSTRY STATISTICS AND DATA SOURCES

Buyer Behavior. 81 percent of B2B buyers have a preferred vendor at first contact (6sense, 2024 Buyer Experience Report). Only 3 percent of buyers fully trust sales representatives (HubSpot research, various years). 80 percent of the B2B buying journey is self directed (Gartner, Future of Sales 2025). 82 percent of decision makers review a firm's LinkedIn before accepting a meeting (LinkedIn Sales Solutions).

Relationship and Reactivation Data. Acquiring a new client is 5 to 7 times more expensive than reactivating an existing or dormant

one (Frederick Reichheld, Bain & Company; *Harvard Business Review,* October 2014). Referred professionals are preferred by 73 percent of buyers (Nielsen / Edelman Trust Barometer). Referral leads convert at 11 percent, the highest of any B2B channel (Friendbuy, 99Firms, Marketo). Referred customers have 37 percent higher retention (Deloitte referral research).

Trigger and Signal Data. Known contacts convert at 37 percent win rate compared to 19 percent cold outreach (Champify, 2025 Impact Report). First seller to reach a prospect after a trigger event is 5 times more likely to win (Elias). Response rates improve 2 to 4 times when outreach is tied to a relevant signal (multiple CX and B2B survey sources; exact ranges vary).

Proof and Content Data. 70 percent of B2B marketers rank case studies as the most effective form of content (Content Marketing Institute). 47 percent of buyers consult case studies during vendor evaluation (Demand Gen Report). Buyers are 67 percent more likely to close when case studies are delivered during evaluation (B2B sales research compilations). 62 percent of buyers trust a firm more when customer voices are present (Demand Gen Report). The fastest growing professional services firms are 3 times more likely to publish original research (Hinge Research Institute).

Mabbly Proprietary Benchmarks. 8.1 percent reply rate on signal activated outreach versus 1.3 percent on generic sequences. $78K versus $486K in pipeline from the same 200 contacts under two different systems. 96 percent of CRM contacts sit dormant on average across the firms we audit. 0.2 percent cold email conversion in professional services. All figures drawn from internal Mabbly engagement and audit data, 2024 to 2026.

SECTION 4. PRACTITIONER INTERVIEWS

All practitioner interviews cited in this book were conducted by Adam Fridman, either on the Future of People Initiatives podcast or in Mabbly Discovery Sessions between 2023 and 2026. Interviews are stored in our internal Fathom knowledge base, comprising 590 recorded calls as of publication. Quotations attributed to roles rather than named individuals are drawn from interviews where the source requested anonymity or where the quotation is a composite across multiple interviews with practitioners in the same role.

Named interview contributors whose quotations appear in this book: Barry Saltzman (Managing Partner), quoted on brand essence and network consistency, appears on Future of People Initiatives Season 6 Episode 1. Victoria Aguirre (Mabbly), quoted on the internal Dead Zone and the marketing/BD silo. Richard Ashbaugh (Mabbly CEO and coauthor), all opening scenes drawn from direct operating history at Monogram Group, AArete, and Axiom/Lotus Blue. Additional practitioner interviews contributed quotes, scenes, and data points under anonymized attribution; complete credit will appear with the source's written approval in future editions.

SECTION 5. FUTURE OF PEOPLE INITIATIVES PODCAST

Hosted by Adam Fridman. 80 plus episodes across six seasons as of 2026. Available on Spotify, Apple Podcasts, and fofpi.com. Key episodes referenced in this book:

Season 6 Episode 1. Barry Saltzman and Richard Ashbaugh. On the Core, brand essence, and narrowing. Cited in the Five Truths chapter.

Season 5 (Unblock Growth). 12 episodes focused on CMOs, CROs, and growth executives. Themes: marketing impact, tightening budgets, innovative growth strategies. Multiple episodes informed the argument in the Wrong Map and Five Truths chapters.

Seasons 1 through 4. Themes of people initiatives, culture transformation, purpose driven leadership, and organizational habits. 450 plus interviews across these seasons form the foundation of Adam's research methodology referenced throughout the book.

SECTION 6. SELECTED ARTICLES BY ADAM FRIDMAN

Adam Fridman is a contributing writer at Inc. Magazine. Archive available at inc.com/author/adam fridman. Articles directly relevant to this book:

"14 Months, 450 Interviews, and 3 Lessons." Inc., 2017. The origin of the research methodology. Establishes the 450 plus interview count referenced throughout the book.

"Purpose? Values? Innovation? What's the Real Key to Company Culture Success?" Inc., 2017.

"Why Culture and Purpose Must Align Within the Workplace." Inc., 2017.

"Why Purpose Should Last 100 Years (at Least)." Inc., 2018.

"Not Just Pretty Words: Three Strategies for Living Your Values." Inc., 2018.

SECTION 7. PROPRIETARY DATA SOURCES

Fathom Knowledge Base. 590 recorded calls, transcribed and stored internally at Mabbly. Source of all practitioner quotes and interview data referenced in this book.

Mabbly Discovery Session Data. Proprietary data drawn from hundreds of Discovery Sessions conducted with managing partners across management consulting, legal, financial advisory, IT services, engineering, and architecture firms between 2023 and 2026.

Mabbly Signal Activated Outreach Metrics. Operational benchmarks drawn from client campaigns over the same period. Includes the 8.1 percent versus 1.3 percent reply rate differential, the pipeline comparison on matched contact sets, and the 96 percent average CRM dormancy rate.

AArete Internal Data. Richard Ashbaugh's direct operating history as CMO. 160 dormant proposals in HubSpot, $125M firm revenue context, thousands of partner relationships.

Monogram Group Case Study. Richard Ashbaugh's direct operating history as founder and CEO. $2M to $25M growth trajectory, PE beachhead strategy, brand narrowing results.

Axiom and Lotus Blue Case Study. Richard Ashbaugh's direct operating history. 19 competing firms named Axiom, a complete rebrand, and a successful sale in 2024.

SECTION 8. FRAMEWORKS REFERENCED WITH ATTRIBUTION

The Relationship Revenue OS is our original framework, but it stands on the shoulders of work by others. Where we have adapted or been directly influenced by a published framework, we attribute here.

EOS / Traction (Core Focus, Rocks, Level 10). Gino Wickman, *Traction* (2012). Influenced the Core and the Weekly Rhythm.

Hedgehog Concept. Jim Collins, *Good to Great* (2001). Influenced the Core.

Beachhead Strategy. Geoffrey Moore, *Crossing the Chasm* (1991). Influenced the DESIGN layer.

SPIN Selling. Neil Rackham, *SPIN Selling* (1988). Validated the Formula.

Trigger Event Selling. Craig Elias, *SHiFT!* (2010). Validated the timing argument in the Formula chapter.

Challenger Sale. Matthew Dixon, *The Challenger Sale* (2011). Validated the insight driven selling pattern in the Formula chapter.

Activator Advantage. Matthew Dixon, *Harvard Business Review,* November/December 2023. The Rainmaker Genome Project.

Dunbar's Number. Robin Dunbar, Oxford research, 1992. The 150 relationship limit.

Trust Equation. Maister, Green, and Galford, *The Trusted Advisor* (2000). Conceptual foundation.

Strategy Canvas. Kim and Mauborgne, *Blue Ocean Strategy* (2005). Conceptual influence on the DESIGN chapter.

OKRs. John Doerr and Andy Grove, *Measure What Matters* (2018). Conceptual influence on GTM Rocks.

SECTION 9. STATISTICAL VERIFICATION NOTES

During the final fact check of this book, we verified every external statistic we cite. A handful required correction of a widely circulated attribution or a reframing of the phrasing. We note the corrections here for readers who want to follow the original source back to its publication.

The "81 percent of buyers have a preferred vendor" statistic is from the 6sense 2024 Buyer Experience Report, not Gartner or Forrester, despite frequent misattribution in secondary sources.

The "7 times more expensive to acquire than retain" statistic traces to Frederick Reichheld's research at Bain & Company, published in *Harvard Business Review* (October 2014). The accurate range is 5 to 7 times. 7 is the upper end.

The "37 percent win rate on trigger based outreach versus 19 percent on cold" is from the Champify 2025 Impact Report, not earlier Bain or Gartner studies as sometimes claimed.

The "case studies increase closure by 67 percent" statistic is accurate in its phrasing as "buyers are 67 percent more likely to close when case studies are presented." The semantic distinction matters for citation purposes.

The "3 percent trust sales reps" statistic is from HubSpot research, widely cited across years. Phrasing varies across sources ("consider salespeople trustworthy").

Where a statistic appears in the book without external attribution, it is drawn from Mabbly operational or Discovery Session data and is labeled as such in the STAT index above in Section 3.

Corrections and sourcing questions: sources@mabbly.com

WITH GRATITUDE

Acknowledgments

This book exists because 400 professional services leaders sat down with us, opened their books, and told us the truth about how their firms actually grow. Without that honesty, there would be no pattern to see and no system to write. Our first thanks go to them.

To the managing partners and rainmakers who let us quote them directly, and in many cases by name. You took a risk telling the story of a plateau, a dead zone, a misfire. Other firms will grow faster because you did.

To the Mabbly team. Victoria, who named the internal dead zone before we had language for it. Gena, who built the operational discipline that made every Discovery Session produce more than a conversation. Every consultant, designer, and strategist who ran the drills with us and sharpened the frameworks against real firms in real quarters. The system in this book is yours more than it is ours.

To Jonathan Copulsky, for the endorsement, the long conversations, and the willingness to read early drafts and tell us which ones were not working yet.

To Julie Fleming, whose work on the reluctant rainmaker gave us the psychological frame that every firm we have worked with has eventually needed to confront.

To our families. Writing a book while running a firm is an act performed on loaned time. The people who loaned us the hours know who they are, and what this meant.

Finally, to every firm that read the book, ran the Monday Morning Tests, and came back to tell us what worked and what broke. The second edition will be better because of you. The first edition is already better than the first draft because of the people named above.

Adam & Richard

CHICAGO, 2026

THE AUTHORS

About the Authors

ADAM FRIDMAN

Adam Fridman is the co founder of Mabbly, a go to market firm for professional services companies, and the author of *The Science of Story.* He has spent the last decade building growth systems for consulting firms, agencies, and advisory practices, and has interviewed hundreds of managing partners about how their firms actually generate revenue. His work has been featured in Inc., Forbes, and Entrepreneur. He lives in Chicago.

RICHARD ASHBAUGH

Richard Ashbaugh is the CEO of Mabbly and the former founder and CEO of Monogram Group, a branding firm he built and sold in 2019. Over a 25 year operating career, he raised, scaled, and sold professional services firms, and has

spent the last five years codifying what actually works inside a firm between five and one hundred million in revenue. He has appeared on the GTM for Professional Services podcast, where he and Adam interview practitioners about the systems behind their growth. He lives in Chicago.

Adam and Richard co host the GTM for Professional Services *podcast and write weekly on mabbly.com.*
